

If you are a student that **HAS** access to technology, this is not the packet for you. This packet is for students who pick up and drop off their work at the front office every week. If you have access to technology, please go back to your teacher's website and complete the correct assignment.

Name: \_\_\_\_\_ Period: \_\_\_\_\_ Teacher: J. Richardson

Distance Learning  
Week 5: May 4<sup>th</sup> to May 10<sup>th</sup>

## Assignment 5.1 – What is a Mole?

*Please read the following:*

- The **mole** is a counting unit (similar to a dozen)
  - o Except instead of 12, it's 602 billion trillion 602,000,000,000,000,000,000,000
  - o It is commonly written as:  $6.02 \times 10^{23}$  (in scientific notation)
- The mole works just like other counting units
  - o 1 dozen cookies = 12 cookies                      1 mole of cookies =  $6.02 \times 10^{23}$  cookies
  - o 1 dozen cars = 12 cars                                1 mole of cars =  $6.02 \times 10^{23}$  cars
  - o 1 pair of shoes = 2 shoes                              1 mole of shoes =  $6.02 \times 10^{23}$  cars
- This number is named in honor of **Amedeo AVOGADRO (born 1776 – died 1856)**, who studied quantities of gases and discovered that no matter what the gas was, there were the same number of molecules present
  - o So  $6.02 \times 10^{23}$  is known as Avogadro's Number

**Learning Check** – *please circle the correct answer*

1. How many sulfur atoms are in a mole of sulfur atoms?
  - a. 12 atoms
  - b. 602 atoms
  - c.  $6.02 \times 10^{23}$  atoms
  - d.  $6.02 \times 10^{12}$  atoms
2. Suppose we invented a new collection unit called a rapp. One rapp contains 8 objects. How many oranges are in 2.0 rapps?
  - a. 8 oranges
  - b. 12 oranges
  - c. 16 oranges
  - d.  $6.02 \times 10^{23}$  oranges

**The coolest thing about the mole:** you can find the mass of 1 mole of an atom by looking up its atomic mass from the periodic table! The mass of a mole of any compound is equivalent to the sum of the atomic masses of the elements that make up that compound! This means:

**1 mole of atoms is  $6.02 \times 10^{23}$  atoms and has a mass of that atom's atomic mass!**

## Assignment 5.2: Calculating Molar Mass

How to calculate Molar mass:

1. Look at the chemical formula of the compound
2. Find the Atomic Mass for each element (there is a periodic table on the last page of this packet!)
3. Add the totals together
4. Round to the nearest 0.01 place

### Example 1:

Find the Molar Mass of  $\text{SO}_3$

$$\begin{aligned} 1 \text{ S atom} \times 32.066 &= 32.066 \text{ g/mol} \\ 3 \text{ O atoms} \times 15.999 &= 47.997 \text{ g/mol} \end{aligned}$$

$$32.066 \text{ g/mol} + 47.997 \text{ g/mol} = 80.063 \text{ g/mol}$$

**The molar mass of  $\text{SO}_3$  is 80.06 g/mol**

### Example 2:

Find the Molar Mass of  $\text{Ba}(\text{NO}_3)_2$

$$\begin{aligned} 1 \text{ Ba atom} \times 137.327 &= 137.327 \text{ g/mol} \\ 2 \text{ N atoms} \times 14.007 &= 28.014 \text{ g/mol} \\ 6 \text{ O atoms} \times 15.999 &= 95.994 \text{ g/mol} \end{aligned}$$

$$137.327 \text{ g/mol} + 28.014 \text{ g/mol} + 95.994 \text{ g/mol} = 261.335 \text{ g/mol}$$

**The molar mass of  $\text{Ba}(\text{NO}_3)_2$  is 261.34 g/mol**

Calculate the molar mass and mass of 1 mole of each compound.

Show your work and don't forget units. Molar mass is in **grams/mole**. Mass is in **grams**.

1.  **$\text{N}_2$**  Molar mass of  $\text{N}_2$  \_\_\_\_\_.  
1 mole of  $\text{N}_2$  has a mass of \_\_\_\_\_.
2.  **$\text{H}_2\text{O}$**  Molar mass of  $\text{H}_2\text{O}$  \_\_\_\_\_.  
1 mole of  $\text{H}_2\text{O}$  has a mass of \_\_\_\_\_.
3.  **$\text{CuCl}_2$**  Molar mass of  $\text{CuCl}_2$  \_\_\_\_\_.  
1 mole of  $\text{CuCl}_2$  has a mass of \_\_\_\_\_.
4.  **$\text{C}_6\text{H}_{12}\text{O}_6$**  Molar mass of  $\text{C}_6\text{H}_{12}\text{O}_6$  \_\_\_\_\_.  
1 mole of  $\text{C}_6\text{H}_{12}\text{O}_6$  has a mass of \_\_\_\_\_.
5.  **$\text{CaCO}_3$**  Molar mass of  $\text{CaCO}_3$  \_\_\_\_\_.  
1 mole of  $\text{CaCO}_3$  has a mass of \_\_\_\_\_.
6.  **$(\text{NH}_4)_2\text{O}$**  Molar mass of  $(\text{NH}_4)_2\text{O}$  is \_\_\_\_\_.  
1 mole of  $(\text{NH}_4)_2\text{O}$  has a mass of \_\_\_\_\_.

# Assignment 5.3: Moles and Mass Wrap Up

If you need additional space, show work on a separate page and turn in your work with your packet.

## Part 1: Reviewing the mole

1. If I have "one mole" of atoms, how many atoms do I have?
2. If I have 3 moles of donuts, how many donuts do I have?
3. If I have  $\frac{1}{2}$  a mole of carbon, how many carbon atoms do I have?

## Part 2: Molar Mass

Calculate the molar mass of each of the following. You must show all of your work to get credit for these problems. "I just did it in my calculator" is not an acceptable response. **A periodic table is included as the last page of this packet!!!**

4. KF
5. H<sub>2</sub>S
6. NaNO<sub>3</sub>
7. Mg(OH)<sub>2</sub>
8. Al<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>

## Part 3: Using Molar Mass

Use the molar masses you calculated in part 2 above to answer the following questions. The table below shows an example problem. You must show all of your work to get credit for these problems. "I just did it in my calculator" is not an acceptable response.

*Example:* If I have 1 mole of KF, how much will it weigh? How many molecules will it be? What about 2 moles?

Moles KF	Mass/Weight	Molecules
1 mole KF	58.096 grams	$6.02 \times 10^{23}$ molecules
2 moles KF	$2 \times 58.096 = 116.192$ grams	$2 \times (6.02 \times 10^{23}) = 12.04 \times 10^{23}$ molecules

9. How much will 1 mole of H<sub>2</sub>S weigh?
10. How much will 0.50 moles of NaNO<sub>3</sub> weigh?
11. How much will 3 moles of Mg(OH)<sub>2</sub> weigh?
12. If I have about 68.2 grams of H<sub>2</sub>S, how many moles do I have?
13. If I have about 342.15 grams of Al<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>, how many *molecules* do I have?

## Answer Keys

5.1

- 1)  $6.02 \times 10^{23}$  atoms
- 2) 16 oranges

5.2

1. **N<sub>2</sub>** Molar mass of N<sub>2</sub> 28.01 g/mol.  
1 mole of N<sub>2</sub> has a mass of 28.01g.
2. **H<sub>2</sub>O** Molar mass of H<sub>2</sub>O 18.02g/mol.  
1 mole of H<sub>2</sub>O has a mass of 18.02g.
3. **CuCl<sub>2</sub>** Molar mass of CuCl<sub>2</sub> 134.45g/mol.  
1 mole of CuCl<sub>2</sub> has a mass of 134.45g.
4. **C<sub>6</sub>H<sub>12</sub>O<sub>6</sub>** Molar mass of C<sub>6</sub>H<sub>12</sub>O<sub>6</sub> 180.16g/mol.  
1 mole of C<sub>6</sub>H<sub>12</sub>O<sub>6</sub> has a mass of 180.16g.
5. **CaCO<sub>3</sub>** Molar mass of CaCO<sub>3</sub> 100.09g/mol.  
1 mole of CaCO<sub>3</sub> has a mass of 100.09g.
6. **(NH<sub>4</sub>)<sub>2</sub>O** Molar mass of (NH<sub>4</sub>)<sub>2</sub>O is 52.08g/mol.  
1 mole of (NH<sub>4</sub>)<sub>2</sub>O has a mass of 52.08g.

5.3

Part 1

1. If I have "one mole" of atoms, how many atoms do I have?  $6.02 \times 10^{23}$  atoms
2. If I have 3 moles of donuts, how many donuts do I have?  $3 \times 6.02 \times 10^{23}$  atoms =  $1.81 \times 10^{24}$  donuts
3. If I have  $\frac{1}{2}$  a mole of carbon, how many carbon atoms do I have?  $6.02 \times 10^{23}$  atoms / 2 =  $3.01 \times 10^{23}$  carbon atoms

Part 2

4. KF = 58.10 g/mol
5. H<sub>2</sub>S = 34.10 g/mol
6. NaNO<sub>3</sub> = 84.99 g/mol
7. Mg(OH)<sub>2</sub> = 58.32 g/mol
8. Al<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub> = 342.15g/mol

Part 3

9. How much will 1 mole of H<sub>2</sub>S weigh? 34.10 g
10. How much will 0.50 moles of NaNO<sub>3</sub> weigh? 42.50 g
11. How much will 3 moles of Mg(OH)<sub>2</sub> weigh? 174.96 g
12. If I have about 68.2 grams of H<sub>2</sub>S, how many moles do I have? 2 moles (2.00 mols with sigfigs!)
13. If I have about 342.15 grams of Al<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>, how many *molecules* do I have?  $6.02 \times 10^{23}$  molecule

14.
