

1 **Chapter 15**

2 **Grade Ten – World History, Culture, and Geography: The Modern**

3 **World**

- 4 • How did ideas associated with the Enlightenment, the Scientific  
5 Revolution, the Age of Reason, and a variety of democratic revolutions  
6 develop and impact civil society?
- 7 • Why did imperial powers seek to expand their empires? How did colonies  
8 respond? What were the legacies of these conquests?
- 9 • Why was the modern period defined by global conflict and cooperation,  
10 economic growth and collapse, and global independence and connection?

11 The more than two hundred and fifty year period covered by the tenth-grade  
12 course highlights the intensification of a truly global history as people, products,  
13 diseases, knowledge, and ideas spread around the world as never before. The  
14 course begins with a turning point: the important transition in European systems  
15 of governance from divine monarch to a modern definition of a nation-state  
16 organized around principles of the Enlightenment. The course ends with the  
17 present, providing ample opportunities for teachers to make connections to the  
18 globalized world in which students live. As students move through the years 1750  
19 through the present they consider how a modern system of communication and  
20 exchange drew peoples of the world into an increasingly complex network of  
21 relationships in which Europe and the United States exerted great military and

22 economic power. They explore how people, goods, ideas, and capital traveled  
23 throughout and between Asia, Africa, the Americas, and Europe. They analyze  
24 the results of these exchanges. The ability to see connections between events  
25 and larger social, economic, and political trends may be developed by having  
26 students consider the most fundamental changes of the era:

- 27 • The intensification of the movement toward a global market aided by rapid  
28 transportation of goods around the world, powerful international financial  
29 institutions, and instantaneous communication
- 30 • The emergence of industrial production as the dominant economic force  
31 that shaped the world economy and created a related culture of  
32 consumption
- 33 • Increasing human impact on the natural and physical environment through  
34 the growth in world population, especially urban settings where  
35 populations engaged in mass consumption through mechanical and  
36 chemical developments related to the Industrial Revolution
- 37 • Imperial expansion across the globe and the growth of nation-states as  
38 the most common form of political organization
- 39 • The application of industrial technology and scientific advancements to the  
40 development of mechanized warfare, which drew millions of people into  
41 the experience of “total war”
- 42 • The conflict between economic and political systems that defined the post-  
43 World War II period

- 44       • The emergence of ideas of universal rights and popular sovereignty for all  
45           individuals, regardless of gender, class, religion, or race, which spread  
46           around the world

47 The content covered in grade ten is expansive, and the discipline-specific skills  
48 that are to be taught are equally demanding. In order to highlight significant  
49 developments, trends, and events, teachers should use framing questions  
50 around which their curriculum may be organized. Organizing content around  
51 questions of historical significance allows students to develop certain content  
52 areas in great depth. Framing questions also allow teachers the leeway to  
53 prioritize their content and highlight particular skills through students'  
54 investigations of the past. Moreover, through an in-depth study of individual  
55 events and people, students can trace the development of even larger themes,  
56 such as the quest for liberty and justice, the influence and redefinition of national  
57 identity, and the rights and responsibilities of individual citizens. Questions that  
58 can frame the year-long content for tenth grade include: **How did ideas**  
59 **associated with the Enlightenment, the Scientific Revolution, the Age of**  
60 **Reason, and a variety of democratic revolutions develop and impact civil**  
61 **society? Why did imperial powers seek to expand their empires? How did**  
62 **colonies respond? What were the legacies of these conquests? Why was**  
63 **the modern period defined by global conflict and cooperation, economic**  
64 **growth and collapse, and global independence and connection?**

65       As students learn about modern world history, they should be encouraged to  
66       develop reading, writing, speaking, and listening skills that will enhance their

67 understanding of the content. As in earlier grades, students should be taught that  
68 history is an investigative discipline, one that is continually reshaped based on  
69 primary source research and on new perspectives that can be uncovered.

70 Students should be encouraged to read multiple primary and secondary  
71 documents; to understand multiple perspectives; to learn about how some things  
72 change over time and others tend not to; and they should appreciate that each  
73 historical era has its own context and it is up to the student of history to make  
74 sense of the past on these terms and by asking questions about it.

75

## 76 **The World in 1750**

- 77 • How were most societies organized in the 1700s?
- 78 • Who held power in the 1700s? Why?
- 79 • What was the divine right of kings?

80 Students begin tenth grade world history with a survey of the world in 1750.

81 This question can frame students' initial explorations: **How were most societies**  
82 **organized in the 1700s?** Students analyze maps of the gunpowder empires  
83 (Qing China, Mughal India, Ottoman Empire, Safavid Persia, Spain, France,  
84 England), trade routes (Atlantic World, Pacific/Indian Ocean, and world trade  
85 systems), and colonies. The teacher explains that in 1750, people were living in  
86 the very end of the pre-modern world. Although there had been many differences  
87 in peoples' experiences depending on their location, culture, and language, there  
88 were certain broad patterns that were present in most states and empires. Most  
89 states and empires were ruled by one leader, called a king, tsar, sultan, emperor,

90 shah, or prince. Students can consider the comparative question: **Who held**  
91 **power in the 1700s? Why?** This ruler was usually, but not always, a man who  
92 came from a dynasty, a family of rulers. Dynasties changed all the time, when  
93 kings were defeated and overthrown, but the winners would then set up a new  
94 dynasty under one leader. The tsar or sultan got his legitimacy from his birth into  
95 the royal family and the support of religious and political elites. Most emperors  
96 claimed that they had been chosen or blessed by divine power, and that they  
97 ruled on behalf of God to keep order and justice in the society. The question  
98 **What was the divine right of kings?** helps students consider the construction  
99 of monarchical governments and societies.

100        Besides the royal family, there were elite groups in that society who had  
101 political, military, or religious power, and owned wealth and land. These elite  
102 groups went by different names in each state or empire, such as nobles and  
103 scholar-officials, but they had privileges, that is, special rights that ordinary  
104 people did not have. Often elite status was based on birth. There weren't many  
105 elites, either, as they were about three to five percent of the population. Below  
106 the elite groups, there was a small middle class. But the majority of people in the  
107 world worked as farmers and had very little wealth or material possessions, no  
108 education, and no political power. The reason that this poor farmers group was  
109 so large was because of the limits of energy, power sources, and technology in  
110 the pre-modern world. Ninety percent of the people had to work full-time at  
111 farming, spinning thread for cloth, and other repetitive manual jobs to produce  
112 food, clothing and shelter for everyone. The only power sources were human,

113 animal, wind, and water. There was only enough surplus in the society for a small  
114 percentage of people to have more than basic food, clothing, and shelter.

115       Dynasties and elite groups defended their power, wealth, and privilege  
116 through customs of social order, force and propaganda. They usually resisted  
117 giving power to lower social groups, for fear that the nobles or other elites would  
118 lose their wealth and privileges. In all societies, customs of social order were  
119 hierarchical, meaning that people were unequal. Some people were higher and  
120 better than ordinary people.

**Grade Ten Classroom Example: The Divine Monarch**

Ms. Lee’s tenth grade class is learning about the divine monarch by focusing on one key 1610 speech that King James I delivered to Parliament. Ms. Lee has excerpted this speech (she found it by searching online for King James I’s “Speech to Parliament” and locates portion that begins with the phrase, “The state of Monarchy is the supremest thing upon earth...” and continues for the next three paragraphs) because it illustrates the way in which kings were perceived to be divinely inspired, and thus their power was understood to be god-like. She has also selected this speech because it clearly lays out the central claim and supporting details of why King James I felt this way. Ms. Lee begins her lesson by telling her students that they will be investigating the question: **How did King James I argue that kings are like gods?** After providing her students with very brief background information about when and how James came to power, Ms. Lee presents the primary source to her students. She tells

her students that this is a relatively straight-forward primary source because King James I makes a claim, he supports his claims with reasons, and he offers evidence for his reasons and central claim (in much the same way her students would make a claim in an essay). She directs her students to read through the speech a couple of times, making annotations as they find different claims King James I makes. As they read the speech a first time, Ms. Lee’s students read for the broad claims. As they read it a second time, Ms. Lee tells her students to work on filling in the graphic organizer she has created. The graphic contains boxes for which students are directed to fill in the following information: 1) the central claim made by James I; 2) the reasons he uses to support his central claim; 3) the evidence he provides to illustrate his reasons; 4) the flaw in his reasons. After Ms. Lee’s students complete the graphic, she facilitates table then whole-class discussions to confirm that the students understand the way in which King James I constructs his argument, and that his central flaw lies in his central claim. Ms. Lee then asks her students to work in pairs to construct a paragraph response to the central question: **How did King James I argue that kings are like gods?**

121

122 **1750-1917: Revolutions Reshape the World**

123 **Democratic Revolutions**

124 • How were enlightened ideas a break from the past?

- 125 • How did the “social contract” affect ordinary people?
- 126 • Why did civic reformers argue for representative governments?
- 127 • What are individual or natural rights? Who received those rights in the
- 128 eighteenth century?
- 129 • What were the consequences of trying to implement political revolutionary
- 130 ideas in Europe, Latin America, and North America?
- 131 • How do the French, American, and Haitian Revolutions compare to one
- 132 another?
- 133 • How is national identity constructed?

134 The eighteenth century witnessed the development of two revolutionary  
135 trends that ultimately influenced the world in ways that are still felt today: political  
136 and industrial revolutions. Before students learn about the on-the-ground  
137 experiences and consequences of these two revolutions, they should learn about  
138 the ideas that gave rise to them. Political revolutionary ideals were rooted in  
139 notions of Athenian democracy, English constitutional laws, the Enlightenment,  
140 and other traditions of European political thought, and they emphasize the rule of  
141 law, reason, individual rights, republicanism, and citizenship. These concepts are  
142 abstract, and the primary sources that illustrate these concepts are dense and  
143 challenging for students to navigate. When possible, teachers should try to  
144 introduce brief excerpted primary sources or secondary sources that convey  
145 meaning in a direct way. Even though principles of political revolutions are  
146 challenging to navigate, students should learn the ideas that guided much of

147 modern history before they proceed to learn about the reality and put them into a  
148 comparative context.

149 The eighteenth-century revolutionary ideas, which influenced much of the  
150 world in the modern period, had its origins in Judeo-Christian culture and Greco-  
151 Roman philosophy. Both Jewish and Christian scriptures informed ethical beliefs,  
152 while Greek philosophers like Plato and Aristotle were concerned with the  
153 establishment of the rule of law to prevent tyranny. Roman legal philosophy built  
154 on Greek ideas of citizenship—defined as the exercise of one’s talents in the  
155 service of the civic community— as necessary to protect the authority of the  
156 state. However, authoritarian ideas, such as divine right of kings, the privileged  
157 status of nobles and clergy, and rule by elite groups, were also traditional  
158 concepts drawing on ancient ideas and practices. In the 1700s, authoritarian  
159 institutions and ideas governed every state and empire, and to Europeans in that  
160 time, the revolutionary ideas were quite new. This question can frame students’  
161 understanding of political revolutionary ideas: **How were enlightened ideas a**  
162 **break from the past?** In order for students to understand the significance of  
163 concepts like “the rule of law,” “citizenship,” “reason,” “liberty,” and “property,” for  
164 example, teachers should present them as a dramatic break from the past. As  
165 students have just finished learning about the seeming divine power of  
166 monarchs, they can begin to see how sharply the new ways of learning and  
167 thinking were substantially different. Thus, there is a key tension for teachers:  
168 emphasizing what a big break from the past these ideas are, but reminding  
169 students that the ideas are rooted in ancient societies. The ideas of equality,

170 representation, and rights were so inspiring to people because they emerged in a  
171 world dominated by hierarchy, inequality, and lack of representation and rights.

172 Political revolutionary ideas were advocated by civic reformers. Some of the  
173 most noted civic reformers were John Locke, Thomas Hobbes, Jean-Jacques  
174 Rousseau, Charles-Louis Montesquieu and Adam Smith. These men and other  
175 enlightenment thinkers developed the notion of the social contract. Students can  
176 consider this question as they investigate the abstract ideas of political  
177 revolutionaries: **How did the “social contract” affect ordinary people?** The  
178 social contract was an idea that stated there should be an agreement among  
179 members of a society to cooperate for mutual social benefits in pursuit of an  
180 ordered society. Key components of the social contract that students should  
181 learn about are that men have natural rights to life, liberty, and property. Although  
182 some of these natural rights were not entirely new, before they had been applied  
183 to only certain privileged classes; civic reformers, however, advocated that all  
184 citizens have rights such as equality before law. Students can investigate the  
185 questions **What are individual or natural rights? Who received those rights**  
186 **in the eighteenth century?** as they trace political revolutionary ideas. In addition,  
187 by comparing the language employed by leading revolutionary writers, such as  
188 John Locke (whose *Two Treatises of Government* will help students understand  
189 the connection between the enlightenment and revolutions), Thomas Jefferson  
190 (whose words from the American Declaration of Independence will prove useful),  
191 James Madison (whose Virginia Plan at the Constitutional Convention will be  
192 useful in teaching students about distribution of power), Mary Wollstonecraft

193 (whose *A Vindication of the Rights of Woman* will provide powerful arguments  
194 about women’s rights), and Adam Smith whose *Wealth of Nations* provided the  
195 foundation for a market economy and the rights of individuals in that economy,  
196 students can compare the proposals that each contributed to these crucial  
197 philosophical and political developments. Once students have been introduced to  
198 these principles and understand how dramatically different they were from most  
199 Europeans’ recent past, teachers might have students creatively explain their  
200 understanding of the social contract by creating political cartoons, performing an  
201 original skit, or writing a short fictional story to illustrate the main components of  
202 the contract.

203       Students also learn that the social contract, and especially the notion of  
204 natural rights, gave rise to newer ideas about the purpose of government. This  
205 question can frame students’ understanding about the relationship between  
206 natural rights and government: **Why did civic reformers argue for**  
207 **representative governments?** Civic reformers argued that the people should be  
208 the basis of government, and that men create governments to protect natural  
209 rights. They argued that these rights were inherent in human beings and that it  
210 was through the social contract that individuals ceded certain of their inherent  
211 rights to the government in return for common benefits such as security,  
212 economic regulation, accomplishment of common purposes, etc. Civic reformers’  
213 concern for personal liberty and their suspicions about the dangers of tyranny led  
214 them to argue for a separation of powers and embrace representative  
215 governments of limited power as the ideal form of political organization. As a

216 foreshadowing of the consequences of these ideas, an extension of this new  
217 purpose of government is the notion that if this new republican form of  
218 government does not protect individuals' natural rights, then the people have a  
219 right to overthrow that government and create a new one in its place.

**Grade Ten Classroom Example: Connecting Ancient Philosophies with  
Political Revolutionary Principles**

Ms. Davis' tenth grade class is in the middle of its political revolution unit. Using the free lesson, *Tyranny and the Rule of Law*, from the California History-Social Science Project, she asks her students to consider the unit question: **How did tyranny and the rule of law influence revolutionaries?** She has provided her students with several primary sources, including writings from Rousseau as well as excerpts from Plato's *The Republic* and Aristotle's *Politics*. She wants her students to understand how ancient philosophers impacted political revolutionary principles in the 1700s, so she presents them with this secondary text activity. She directs her students to read the directions closely, and to make annotations in the text accordingly.

Following the lesson's directions, Ms. Davis directs her students to read a secondary source, *Ancient Philosophers and the American Revolution*, which provides an overview of the impact of the writing of ancient philosophers upon the political revolutionaries. Specifically, it outlines some of the criticisms that political revolutionaries among the American Colonists had against the British Monarch (King or Queen) and how the ideas of writers like Plato and Aristotle

resonated with American leaders like Thomas Jefferson. Ms. Davis directs her students to put a check in the left margin when they identified an explanation of the criticism of monarchs and tyranny, and in the right margin, to put an x where they see an explanation of the rule of law. In their groups, students are then asked to discuss where they placed check marks and Xs, and explain how these sections help define tyranny and the rule of law. After sharing with their tablemates, Ms. Davis directs her students to review their choices again; making changes as necessary.

At the end of this activity, Ms. Davis asks her students to work in groups and develop brief presentations for the class that address the original question by making claims rooted in the various texts they have read: **How did tyranny and the rule of law influence revolutionaries?**

**CA HSS Content Standards:** 10.1.2. 10.2.1

**CA HSS Analysis Skills (9-12):** Historical Research, Evidence, and Point of View 4; Historical Interpretation 1

**CA CCSS for ELA/Literacy:** RH.9–10.1, 5, 6, 8, SL.9–10.1, 4

**CA ELD Standards:** ELD.P1.9–10.1, 6a, 7, 8, 9, 11a; ELD.PII.9–10.1

220

221 With an understanding of the political revolutionary ideas, students can begin

222 to learn about the realities that developed from them. **What were the**

223 **consequences of trying to implement political revolutionary ideas in**

224 **Europe, Latin America, and North America?** Political revolutions erupted in

225 North America, Europe, and Latin America in the eighteenth century. Leaders of

226 all of the revolutions espoused liberal, democratic, and constitutional ideologies.

227 In most cases, these leaders were from the bourgeoisie, or middle-class; this

228 group was distinct because it was not from the nobility, it tended to not hold

229 power, and it was educated. While the aims of these revolutions were realized

230 only partially, their ideas spread throughout the world, inspiring reforms and

231 revolutions across the globe. During this period, aristocratic and mercantilist

232 elites continually challenged the power of monarchs. These conflicts intensified

233 as states increased taxes in their efforts to pay the costs of centralizing

234 government administration and rising military expenditures. The Glorious

235 Revolution, when the English Parliament emerged victorious and the authority of

236 the monarch was limited by the rule of law, was an early example of this type of

237 contest. In contrast, the American, French, Haitian, and Latin American

238 revolutions a century later overthrew monarchical authority altogether. In North

239 America, colonists issued the Declaration of Independence, asserting that all

240 men have “unalienable Rights” that they sought to be upheld through a

241 republican form of government. The French Revolution led to the dissolution of  
242 the French monarchy, the establishment of a republic, and universal male  
243 participation in politics. Although the French Revolution opened up opportunities  
244 for women and slaves to petition for rights, it succumbed first to a destructive  
245 Terror, then ultimately to despotism and continental war under Napoleon.  
246 American, European, and Latin American revolutionaries defended their actions  
247 using these ideas. Their post-revolutionary constitutions were explicitly written to  
248 limit executive power and protect the rights of citizens. Students should explore  
249 the arguments for individual rights in this era, as well as the exclusion of groups  
250 like women from full access to these rights. In particular, they could consider the  
251 paradox between slavery and individual rights through an examination of  
252 Enlightenment writings and images, including evidence from abolitionist  
253 campaigns and defenses of enslavement.

254       A transatlantic republic of letters helped spread revolutionary thinking and  
255 activism. With the American and French revolutions serving as models of  
256 republican government, former slaves in Haiti, colonial peoples in Latin America,  
257 and military and religious elites in Spain and Portugal all participated in  
258 revolutionary uprisings. Students can make meaning about these revolutions in a  
259 comparative context by addressing the question: **How do the French,**  
260 **American, and Haitian Revolutions compare to one another?** Many new  
261 leaders established constitutional governments that echoed principles from the  
262 Glorious Revolution, Enlightenment ideas embodied in the English Bill of Rights,  
263 the French Declaration of the Rights of Man and the Citizen, and the United

264 States Constitution. Liberal democratic principles, such as individual rights and  
265 the rule of law, replaced traditional aristocratic privileges. Students may consider  
266 how the universal ideas of the Enlightenment texts provided a political tool for  
267 disfranchised groups to press for greater rights in liberal democracies during the  
268 modern era. Yet these revolutionary principles were applied differently in each  
269 context; in the Americas citizenship and natural rights did not apply to slaves,  
270 women, and many men that did not own property, while in Haiti, revolutionary  
271 principles translated directly to the abolition of slavery.

272 Atlantic revolutions and the subsequent Napoleonic Wars resulted in the  
273 establishment of a new type of political structure, the nation-state. Through the  
274 growth of popular print media, the centralization of the state, and the increasing  
275 connections facilitated by transportation networks, people began to imagine  
276 themselves as part of a larger national community. Students can consider the  
277 question: **How is national identity constructed?** in order to learn about these  
278 developments, as well as to serve as a bridge to the next unit on the industrial  
279 revolution. Shared language, religion, literacy, and culture created connections  
280 between people that served as a foundation for the development of a national  
281 identity. Arguments over the definition of citizenship, who was included and  
282 excluded, in the nation-state continue into the contemporary period and therefore  
283 provide opportunities for students to develop further their own understanding of  
284 the rights and responsibilities of citizens.

285

286 **Industrial Revolutions**

287       • Should this era of industrialization be called an Industrial Revolution? Why  
288           or why not?

289       • What were the results of the Industrial Revolutions? How was technology,  
290           and the environment transformed by industrialization?

291       • How did industrial revolutions affect governments, countries, and national  
292           identity in similar and different ways?

293       The Industrial Revolution shifted the center of the world economy from Asia to  
294       Western Europe in the nineteenth century. Students learn that its path diverged  
295       sharply from that of China and India, which had together accounted for nearly  
296       half of the world’s manufacturing prior to the rise of industrialization. Some  
297       historians have criticized the use of the term “revolution,” as the changes brought  
298       by industrialization were often gradual and uneven. Students can wrestle with  
299       this topic by addressing the question: **Should this era of industrialization be**  
300       **called an Industrial Revolution? Why or why not?** In a broad global  
301       perspective, however, industrialization has arguably been one of the most  
302       dramatic transformations in human history, making available vast stores of  
303       underground coal, oil, and gas energy and altering patterns of work, settlement,  
304       international relations, consumption, family relations, and values.

305       The Industrial Revolution was energized by coal and eventually by petroleum  
306       and natural gas. Fossil fuels that drive steam and electrical engines made  
307       possible a huge increase in the amount of productive energy available to  
308       humans. As students will learn later in the course, this revolution facilitated the  
309       development of European imperialism in the late nineteenth century. Together,

310 mechanized heavy industry, a culture of mass consumption, and a global division  
311 of labor continue to shape economic growth in the contemporary world, though  
312 this growth continues to be lopsided in its benefits to the world's population.

313 In addition to its historical significance, the Industrial Revolution also provides  
314 rich opportunities for students to develop their geographic and economic literacy.  
315 Students can consider **What were the results of industrialization?** in order to  
316 come away with a broad overview of how many aspects of life were transformed  
317 by industrialization. Britain was the first nation to industrialize, benefitting from a  
318 number of strengths. Students use a variety of maps to explore Britain's  
319 resources, such as navigable rivers and large coal deposits, an available pool of  
320 labor, an economic and political system that encouraged innovation. Students  
321 review economic data to see how industrialization generated profits for Great  
322 Britain through its role in worldwide trade and from goods produced in its  
323 colonies. The inventions and discoveries of James Watt, Eli Whitney, Henry  
324 Bessemer, Louis Pasteur, Thomas Edison, and others resulted in advances in  
325 science and technology. Agricultural and scientific improvements allowed for a  
326 more urban and healthy population. Advances in medicine led to an increasingly  
327 institutionalized and professionalized medical establishment, which an increasing  
328 understanding of early germ theory. These new technologies and ways of  
329 understanding the world soon spread beyond western Europe to the United  
330 States, and Japan, sharing knowledge worldwide. Students can also identify the  
331 environmental impact of the Industrial Revolution and discuss the positive and  
332 negative consequences of industrialization. Students learn that the industrializing

333 nations, for example Great Britain, were confronted with a wide array of changes  
334 resulting from the Industrial Revolution. They determine that the rapidly growing  
335 population was putting great demands on the natural resources available to  
336 these countries, resulting for example, in a decreasing supply of wood, Great  
337 Britain’s primary source of energy, as well as a major resource for buildings,  
338 ships, and tools (California Environmental Principle I). Students learn that Great  
339 Britain created a system of factory production and coal-powered machinery to  
340 resolve the energy shortage, setting the stage for it to become the wealthiest  
341 country in the world. Using graphs of population growth, cotton textile, iron, and  
342 coal production, as well as an array of primary sources leads students to an  
343 understanding of the relevance of natural resources, entrepreneurship, labor, and  
344 capital combined to the beginning of the Industrial Revolution. (See Appendix F  
345 EEI Curriculum Unit Britain Solves a Problem and Creates the Industrial  
346 Revolution 10.3.1.-10.3.5.)

347       The Industrial Revolution represented a fundamental shift in the production of  
348 goods. Large-scale repetitive-motion machines powered by new energy sources  
349 such as coal and steam improved production and required the expansion of  
350 markets. However, human and animal energy remained important for the vast  
351 majority of people, thereby increasing inequality between people who owned the  
352 means of production and those who engaged in wage labor and subsistence  
353 farming. Competing for profits, corporations came to much greater prominence  
354 as a structure for organizing industries into larger entities with access to greater  
355 resources and with limitation to the personal liability of those operating the

356 industries. These corporations grew substantially as they sponsored continuous  
357 innovations in goods and carefully oversaw systems of production. Wage  
358 laborers subjected to regimented work conditions in factories rapidly produced  
359 inexpensive standardized goods. Industrialization also dramatically changed the  
360 way of life for millions of people who were not directly involved in factory work.  
361 Miners, independent farmers, and plantation workers in Africa, Asia, and Latin  
362 America, were essential to the creation of commodities produced in factories.  
363 Students learn about the relationship between the Industrial Revolution and the  
364 growth of urban centers which resulted in, depopulation of rural areas and  
365 migration to urban areas; a shift from agrarian-based society to manufacturing-  
366 based society; and a change in the pressures society places on natural  
367 resources. Students can consider the multiple ways in which industrialization  
368 transformed people’s daily lives, in terms of providing many more merchantable  
369 goods in the marketplace, to standardizing time and work schedules. Students  
370 can also learn about the negative consequences of industrialization:  
371 overcrowded cities and housing, poor sanitation, unsafe working conditions, for  
372 example.

373       The leaders of world empires reacted to industrial change in various ways.  
374 Russia followed a model of government-sponsored development. In Japan, after  
375 overthrowing the Tokugawa dynasty in a coup, the Meiji government rapidly  
376 embraced industrialization. Japanese government ministers adapted European  
377 military, bureaucratic, and educational techniques, while also creating *zaibatsus*,  
378 a distinctively native form of business organization in which large family-owned

379 monopolies controlled broad sectors of the economy. Leaders in the Ottoman  
380 Empire and China engaged in limited industrialization, but their choices were  
381 constrained by the earlier establishment of informal European empires. This  
382 accelerated their gradual military decline, which had already begun by the 1700s.  
383 The following question can help students place industrialization’s impact upon  
384 nations in a comparative context: **How did industrial revolutions affect**  
385 **governments, countries, and national identity in similar and different ways?**

386 While countries experienced industrialization in distinctive ways, they also  
387 faced some similar experiences. Most states experienced similar challenges in  
388 the shift to industrialized labor. Population growth accelerated in many regions of  
389 the world, and the number of cities with populations of 100,000 or more  
390 multiplied. Populations increasingly concentrated in urban areas where housing  
391 and sanitation infrastructure could rarely keep pace with the growth in need.

392 While the standard of living gradually improved throughout the world, the  
393 disparity between the wealthiest and the poorest people within countries grew.  
394 To make sense of these broad shifts, students can address the question: **How**  
395 **did industrialization affect ordinary people, families, and work?** Addressing  
396 this question through literature from the time presents a valuable opportunity for  
397 History-Social Science teachers to collaborate with English teachers. Teachers  
398 could collective design lessons in which students learn about daily life during  
399 industrialization by reading the work of Dickens, Dreiser, Sinclair, or a number of  
400 muckrackers, for example. At the same time, European and American workers  
401 often protested the rigid time-discipline and poor conditions of factory work.

402 Unions grew, often inspired by new ideologies of socialism, particularly Marxist  
403 concepts of inherent class conflict between the profit interests of capitalists and  
404 the concerns of laborers. Some socialist experimenters set up planned, or  
405 utopian communities in Europe and the United States, most of them short-lived,  
406 where workers would share the products of their labor. Students can be  
407 introduced to the concept of socialism by addressing the question: **Why did**  
408 **socialist ideologies emerge and what were their key tenets?**

409 In pre-industrial societies, family units working in or near the home produced  
410 most goods. Industrialization separated home from work in function and location.  
411 Using relevant primary sources and literature, students can investigate the  
412 impact of industrialization upon families. Middle-class families began to think of  
413 home as a separate sphere for women and children to be protected from the  
414 evils of the industrial environment. Women were discouraged from paid labor,  
415 and children were sent to school. In many poorer families, however, both women  
416 and children continued to work in the paid labor force. Although the mechanized  
417 production of goods and crops dramatically changed life in industrial nations,  
418 most of the world continued to engage in subsistence farming to meet basic  
419 needs. Students may compare the similarities and differences in the  
420 consequences of industrialization in industrial and non-industrial countries while  
421 evaluating the costs and benefits of industrialization. Students can compare and  
422 contrast child labor around the world today with child labor in the 1800s. To  
423 advance students' understanding of ordinary people's experiences with and  
424 responses to industrialization, they can examine a brief primary source, Samuel

425 Smiles' 1882 work, *Self Help*. Students might find especially useful the paragraph  
426 that begins with the sentence: "The spirit of self-help, as exhibited in the  
427 energetic action of individuals, has in all times been a marked feature in the  
428 English character, and furnishes the true measure of our power as a nation." This  
429 and the following few paragraphs illustrate one perspective on how people felt  
430 about these years. Teachers can encourage students to read this as a document  
431 with a particular perspective and agenda about how English people should  
432 respond to their new worlds.

433

#### 434 **The Rise of Imperialism and Colonialism**

- 435 • Why did industrialized nations embark on imperial ventures?
- 436 • How did colonization work?
- 437 • How was imperialism connected to race and religion?
- 438 • How was imperialism similar and different between colonies in Africa,  
439 Asia, and Latin America?
- 440 • What were the causes and effects of the Mexican Revolution?
- 441 • How did native people respond to colonization?

442 In this unit, students examine industrialized nations' worldwide imperial  
443 expansion, fueled by demand for natural resources and markets and aided by  
444 ideological motives of a "civilizing mission." The question **Why did industrialized**  
445 **nations embark on imperial ventures?** can help connect students' earlier  
446 learning about industrialization with foreign policy. The economic strength of  
447 industrialized nations gave them an advantage of cheaper goods over nations

448 that engaged in traditional manual production of goods. For much of the late  
449 nineteenth and early twentieth century, local manufacturing in regions such as  
450 India, China, and Latin America declined dramatically. Some scholars use the  
451 label “informal empire” to refer to situations where countries, while not formally  
452 colonized, became increasingly dependent on industrialized nations, which  
453 sometimes threatened violence, to establish the terms and conditions of  
454 international commerce.

455       The race to secure raw materials spurred European, Japanese, and  
456 American imperialism. Students can continue to address the overall question  
457 **Why did industrialized nations embark on imperial ventures?** and they can  
458 also learn about the process of imperialism by considering the question **How did**  
459 **colonization work?** Tropical products, such as rubber and tea, and other  
460 resources for industrial use drove competing nations to claim political, economic,  
461 and territorial rights to colonies. Students should read primary sources that reflect  
462 the multiple motivations behind European imperial efforts. F. D. Lugard’s *The*  
463 *Rise of Our East African Empire* explains in direct clear language why in 1893  
464 European leaders believed it to be necessary to expand their empires for  
465 economic reasons. To locate a useful excerpt from this text, teachers should  
466 search online for the paragraph that begins with the sentence: “It is sufficient to  
467 reiterate here that, as long as our policy is one of free trade, we are compelled to  
468 seek new markets; for old ones are being closed to us by hostile tariffs, and our  
469 great dependencies, which formerly were the consumers of our goods, are now  
470 becoming our commercial rivals.” Students might also read Joseph Conrad’s

471 *Heart of Darkness* or Adam Hothschild’s *King Leopold’s Ghost*. Colonizers also  
472 justified their conquests by asserting arguments of racial hierarchy and cultural  
473 supremacy, offering a vision of civilization in contrast to what they argued were  
474 “backward” societies. Literature and poetry, such as Rudyard Kipling’s “The  
475 White Man’s Burden,” engages students with this period and deepens the ability  
476 of students to understand the era within its own context. Students compare the  
477 perspectives of advocates for and against imperialism and consider the way each  
478 side presents evidence to support their claims. The question **How was**  
479 **imperialism connected with race and religion?** can be addressed by a close  
480 reading and analysis of Kipling’s poem. Overall, students should understand the  
481 multiple inter-connected causes and justifications for colonization: religious,  
482 racial, and political uplift; economic exchange; and geopolitical power.

483 Governments in industrialized nations also viewed overseas expansion as a  
484 means to strengthen their own global strategic position. The development of  
485 more advanced firearms, transportation, and communications than nonindustrial  
486 societies paved the way for a wave of imperialism. Britain, France, and other  
487 European nations established colonies throughout Africa and South and  
488 Southeast Asia, while the United States and Japan did the same around the  
489 Pacific Rim, often allying with local elites and exploiting colonized peoples as  
490 laborers despite sometimes strenuous resistance. Indigenous leaders in various  
491 colonized regions engaged in protracted resistance to the colonizers, though they  
492 were ultimately outmatched by the military superiority of the colonial powers. In  
493 India, for example, students explore the environmental and social effects of

494 Britain’s acquisition and control of the raw goods and markets, and in South  
495 Africa, where its wealth of gold and diamonds provided the capital needed for  
496 further industrialization. Students learn how the competition for and decisions  
497 regarding natural resource acquisition and use influenced perspectives regarding  
498 the use of colonial lands and the nature of colonial rule (California Environmental  
499 Principle V). Only a few countries under European pressure, notably China,  
500 Thailand, Iran and Ethiopia, retained their political independence. Students might  
501 study the Opium Wars in China to learn about the ways in which British attempts  
502 at controlling Chinese markets and opening ports led to extended and intense  
503 conflicts. Students can demonstrate their understanding of this period—and the  
504 different perspectives of both the industrialized and colonized nations—by writing  
505 editorials, government position papers, giving speeches, or creating multimedia  
506 documentaries for their classmates.

507       Although most Latin American nations were technically independent in this  
508 era, they often came under the influence of European nations and the United  
509 States after accepting large loans to help them develop transportation and  
510 communication networks. Latin American countries produced cash crops and  
511 mined raw materials in exchange for cheap goods, which disadvantaged local  
512 industries. The inequality produced between wealthy and poor states, was  
513 mirrored by growing divisions between “haves” and “have nots” in many of these  
514 societies. These tensions led to revolutions in Mexico and elsewhere with leaders  
515 competing over liberal and Marxist visions for their nations. Given students’ close  
516 proximity to Mexico, they might wish to focus on Mexico’s experience during the

517 era of imperialism and learn about its revolution in the context of colonization.  
518 Students can address the question: **What were the causes and effects of the**  
519 **Mexican Revolution?** After teachers briefly review Spanish conquest, Mexican  
520 independence, and the decades-long leadership of Porfirio Diaz with an  
521 emphasis on race and land ownership, students should learn about the high  
522 percentage of land and resources that were owned by foreign investors (mainly  
523 American) in the early twentieth century. Next, teachers might wish to explain the  
524 experience of the ordinary people like the Campesinos and show art from the era  
525 like Diego Rivera’s “Repression.” Teachers should divide students into five  
526 groups that are each assigned a unique perspective and primary source  
527 document from the period: 1) Porfirio Diaz; 2) Moderates (represented by  
528 Madero, Huerta, Carranza); 3) Emiliano Zapata and Campesinos of the South; 4)  
529 Pancho Villa and the Vaqueros of the North; 5) The U.S. To locate the sources  
530 that represent each of these perspectives teachers can search online for “The  
531 Plan de Ayala;” “Pancho Villa’s Dream;” and consult Lucia Nunez’s *Episodes in*  
532 *the History of U.S.–Mexico Relations* as well as John Guyatt’s *The Mexican*  
533 *Revolution*. After each group has identified the perspective and goals of their  
534 group, the whole class should discuss areas of agreement and disagreement  
535 between groups, while the teacher charts it on the board and students take  
536 notes. With so many competing interests in the Revolution, students should  
537 come away with a sense that the extended conflict was a nationalist and socio-  
538 economic revolution. After learning about the results and consequences of the  
539 Revolution, students might write a paragraph about the perspective of the person

540 they represented or make a brief speech about which leader in the Revolution  
541 they would have supported and provide evidence for their position. Students can  
542 continue to survey other examples of nations that stayed independent during the  
543 era of imperialism by considering examples from Asia. In China, Sun Yat-Sen’s  
544 Republic of China replaced centuries of dynastic rule and, with great effort,  
545 fought off the imperialist aspirations of foreign countries. Students further  
546 research the important moments and leaders of the revolutions, including  
547 SunYat-Sen of China, José Martí of Cuba, and Menelik I of Abyssinia.

548       Students can continue to consider the question **How did colonization work?**  
549 in order to understand the concrete results of colonization in a variety of  
550 geographic contexts. Colonizers introduced new infrastructures, medicines,  
551 educational systems, and cultural norms. Print technology and more rapid  
552 transportation aided the growth of organized religion. These technological  
553 developments also facilitated integration of regional Indian religious traditions into  
554 the larger religious tradition of the subcontinent while still retaining their regional  
555 identity. Christian missionaries made use of colonial institutions and  
556 infrastructure to educate and evangelize native peoples, helping to broaden  
557 Christian presence around the world. Some European thinkers joined religious  
558 beliefs to Social Darwinian ideas about the evolution of races, leading to  
559 European efforts to “civilize” native peoples they perceived as “backward.” They  
560 also attempted to reform practices involving marriage and women’s social roles.

561       While some colonial peoples converted to European practices, others deeply  
562 resented the violent exploitation of their people and the disruption of their

563 traditional beliefs. Students should consider the question **How did native people**  
564 **respond to colonization?** in order to make sense of the multiple contexts and  
565 responses to colonization. Nationalist leaders, often educated in European  
566 universities, began to use ideologies rooted in the Enlightenment to challenge the  
567 injustice of Western and Japanese imperialism. Europeans, in turn, were shaped  
568 by their encounters with colonial peoples through their exposure to non-Western  
569 religions and systems of thought for the first time. Imperial encounters  
570 strengthened European nationalism at home as colonizers defined themselves in  
571 response to colonial “others.” In addition, internal tensions sometimes erupted  
572 between dominant and dominated groups within a state or empire. For example,  
573 European Jews had felt that Enlightenment ideals of equality and citizenship  
574 applied to them, although they were a minority in the countries in which they  
575 lived. Anti-Semitic events like the Dreyfus Affair in France made Jews feel that  
576 they were not considered French and were viewed as outsiders. This realization  
577 led to development of Zionism, an expression of Jewish nationalism, namely the  
578 belief in the right to self-determination for the Jewish people. The Affair also  
579 pointed to the tension between the rights of the individual versus the greater  
580 needs of the state. Though the label “globalization” is often restricted to the late  
581 twentieth-century, students might explore the ways in which both the processes  
582 of industrialization and imperialism initiated transformations in transport and  
583 communication technologies, unprecedented levels of global migration, and  
584 accelerating global economic exchange.

## Grade Ten Classroom Example: World History and World Literature

### Background

This year at John Muir high school, the tenth grade world literature teacher, Ms. Alemi, and the tenth grade world history teacher, Ms. Cruz, have decided to collaborate and align their major units of instruction so that their students see the connections between the content taught in each discipline. A number of the reading selections and novels for the tenth grade World Literature class would support students' understandings of the historical concepts and time periods addressed in the world history course. The teachers first determine where their curriculum already intersects and then begin planning interdisciplinary units that align the content and literacy tasks in the two courses.

### World History Lessons

Ms. Cruz's tenth grade world history class is beginning a unit on the era of New Imperialism that took place roughly from the 1830's until the beginning of World War I in 1914. She introduces students to the historical investigation question for the whole unit: **What were the causes and effects of imperialism?** She then focuses students on the question for the first part of the unit: **How did Europeans justify the expansion of their colonial empires?**

Ms. Cruz's introduces excerpts from the primary source *The Dual Mandate in British Tropical Africa* written by Lord Frederick Lugard, the first British governor-general of Nigeria. The book exemplifies the major justifications that European powers gave for building their colonial empires throughout the world and explains

the nature of the *dual mandate*, or that both the colonizer and the colonized benefit from colonial expansion. She provides the students with the background of the various justifications (economic, religious, social Darwinism, etc.) and students work together to pull quotes from the document that exemplify the particular justifications. Students also must explain how the evidence they selected supports the justifications. Students gain additional information from their textbooks and other primary sources that discuss the motivations that European powers had for colonizing other nations.

In order for students to gain the perspective of the indigenous peoples that were colonized by European powers, Ms. Cruz gives her students a number of first-hand accounts. Students find quotes in the texts that reflect both the perspective of colonial people and the impacts that colonization had upon their people and their nations. Ms. Cruz then leads a class discussion in which the students compare and contrast life before and after colonization as well as the perspectives of the colonizers and the colonized.

Next, students walk to different areas in the classroom in which several different primary source images that depict colonization are posted on the wall. Some of these images are political cartoons and newspaper advertisements, but others are art created during the late nineteenth century. Students must walk the gallery and record which European powers and colonies are represented in the image, what is occurring in the image, the symbols that are present in the image, and finally they must determine whether the image is *anti* or *pro* colonization and

explain their reasoning. Ms. Cruz then leads a classroom discussion so that students can share out the evidence that they recorded from each image.

### **Summary of World Literature Lessons**

Meanwhile, in world literature, Ms. Alemi's students begin a unit on African literature by reading *Things Fall Apart*. Written in 1958 by Nigerian novelist Chinua Achebe, the novel takes place in eastern Nigeria at the end of the 19th century and deals with two stories: that of Okonkwo, a respected tribal leader and *strong man* who falls from grace in his Ibo village, and the clash of cultures and changes in values brought on by British colonialism. The story is conveyed through illustrating the life of Okonkwo and his family and the tragic consequences of his actions and events that are beyond his control. In interviews, Chinua Achebe said that he became a writer in order to tell the story from his and his people's (the Ibo) own perspective. The novel was written in English (the language of the British colonizers) and was, in large part, a response and counter-narrative to colonial texts, such as Joseph Conrad's *Heart of Darkness*, which often portrayed Africans as savages or animals.

Ms. Alemi and Ms. Cruz selected the book because it expands their students' knowledge of world literature and because the novel provides students with an opportunity to discover universal messages and themes through the lens of Ibo culture and linguistic and literary techniques that are central to that culture. The novel also supports the learning goals Ms. Cruz has for the students in world history. As the teachers research the novel, they learn that "One of the things

that Achebe has always said, is that part of what he thought the task of the novel was, was to create a usable past. Trying to give people a richly textured picture of what happened, not a sort of monotone bad Europeans, noble Africans, but a complicated picture" (Princeton University Professor Anthony Appiah, cited on Annenberg Learning). The teachers feel that their students are capable of exploring these complex ideas.

Ms. Alemi will facilitate students' deep analytical reading of the novel, which will prepare them to read other texts more carefully and critically, including a novel they select from contemporary Nigerian literature. Over the course of the unit, Ms. Alemi will engage her students to "*dig deep* into the novel, *branch out* to other texts, and *harvest* the knowledge they've gained" by applying it to other texts. See California's 2014 English Language Arts/English Language Development Curriculum Framework, Chapter 7 to see the complete lesson.

### **Concluding Activities for World History**

The students will use the information gathered from primary sources, their textbook, and *Things Fall Apart* to participate in several mini-debates where they speculate about the short- and long-term impact of the colonial experience. The debates, or small group discussions, take various aspects of colonization, such as "What impact will the colonial experience have upon the economies of the colonial powers and their former colonies? How will the colonial experience impact the standard of living, literacy rates, and public health in the developed and developing countries? What impact will the colonial experience have upon

relations between Europe and the developing countries in Asia and/or Africa?”

Students would be responsible for bringing in specific examples from the novel and the primary resources to further discuss the issue and explain which country or countries would benefit most from the experience.

In Ms. Cruz’s class students conclude the unit by writing an essay using the information gathered throughout the unit to address one of the following two questions: **What impact did the colonial experience have upon indigenous peoples and their countries? What impact did the colonial experience have upon Western colonial powers?** Students must provide a clear thesis statement and specific evidence from their text, primary sources examined throughout the unit, as well as examples from the novel *Things Fall Apart*. In addition, they must provide analysis that examines how the evidence that they provided supports the argument in their thesis.

586 **Causes and Course of World War I**

- 587 • Why did The Great War become a World War?
- 588 • How was World War I a total war?
- 589 • What were the consequences of World War I for nations and people?
- 590 • Why did the Russian Revolution develop and how did it become popular?

591 The Great War, later called World War I, began in 1914 as a result of  
592 nationalist tensions in Europe and the subsequent militarization that resulted  
593 from clashes between these states over colonial resources and markets. The  
594 question **Why did The Great War become a World War?** can guide students'  
595 initial investigation into the conflict. This insecurity led these powers to form  
596 alliances, which embroiled the great powers of Europe in a multi-year conflict that  
597 included soldiers from many parts of the world. The gradual disintegration of the  
598 Ottoman Empire, alongside a growing militarization of the European powers,  
599 created a climate of distrust that eroded the balance of power. At the advent of  
600 the war, political leaders who faced social unrest at home saw the war effort as a  
601 way to divert popular criticism and stoke patriotism in support of a war effort.  
602 Students should learn about the complexity of why and how each state justified  
603 its entry into the war. To this end, European governments created propaganda  
604 aimed at encouraging the civilian population to support total war. To deepen  
605 student understanding of the causes of World War I, teachers can divide the  
606 class into groups representing the major participants on both sides in the war. In  
607 their groups, students examine a collection of wartime propaganda and political  
608 cartoons by utilizing one of the many primary-source analysis tools available

609 online to develop a visual analysis of the imagery to understand the link between  
610 claim and evidence in these texts. Based on wartime propaganda, students can  
611 make find similarities and differences in terms of how nations portrayed their  
612 enemy states, through dehumanizing their enemy or highlighting threats to their  
613 own liberty, for example.

614 The war that was to be “over by Christmas” continued as opposing armies on  
615 the Western Front settled into to a stalemate through strategies and tactics in  
616 which each side dug in behind a wall of trenches that reached from the North  
617 Sea to Switzerland. The battles on the Eastern front covered a wider territory, but  
618 also remained largely a stalemate. Using primary sources as well as literature,  
619 such as Erich Maria Remarque’s *All Quiet on the Western Front*, or poetry  
620 including Wilfred Owen, *Dulce et Decorum est*, students can come to appreciate  
621 the struggles faced by soldiers fighting in the trenches. For three years, the  
622 western front moved roughly three miles per year in any one direction. Although  
623 the primary battles of World War I took place in Europe, colonial soldiers from  
624 Africa and Asia had participated in the war effort alongside soldiers from  
625 Australia, New Zealand, and the United States, which entered the war in 1917.  
626 Both military and civilian casualties resulted from a war that had many fronts. To  
627 learn about the unprecedented deadliness of the war, students should address  
628 the question: **How was World War I a total war?** Technological advancements,  
629 such as the machine gun, poison gas, aircraft, and high explosives, allowed for  
630 destruction of human life on a scale previously unknown. The advent of total war  
631 meant mobilizing not only the soldiers, but also civilians on the home front and in

632 colonial territories. Entire societies and economies were focused on war. Combat  
633 in Western Europe, Eastern Europe, and the Middle East (highlighted in Scott  
634 Anderson’s *Lawrence in Arabia*) left marks on these societies that were felt long  
635 after the fighting ended.

636       By 1918, 16 million military personnel and civilians had died and millions  
637 more returned home wounded; this toll was enlarged by that year’s deadly  
638 pandemic of the Spanish Flu. The Ottoman, Austro-Hungarian, and Russian  
639 empires had disintegrated and in their place new, independent states emerged,  
640 including Poland, Russia, Prussia, and Austria. In 1915, as the Ottoman Empire  
641 declined, the Turkish government carried out a systematic genocide against the  
642 Armenian population that had been living on its historic homeland in what is now  
643 eastern Turkey. Turkish authorities first arrested hundreds of Armenian political  
644 and intellectual leaders, sending them to their deaths; Armenian men were  
645 conscripted into work camps where they were killed outright or through  
646 exhaustion. The remaining Armenians were ordered onto death marches into the  
647 Syrian desert, during which they were subjected to rape, torture, mutilation,  
648 starvation, holocausts in desert caves, kidnapping and forced Turkification and  
649 Islamization. More than 1.5 million Armenians, more than half of the population  
650 was eliminated in this way; virtually all their personal and community properties  
651 were seized by the government, and more than 500,000 innocent people were  
652 forced into exile during the period from 1915 to 1923. When the war ended in  
653 1918 the Armenian population was reduced by 75% and their historical lands  
654 were confiscated by the Turkish government. Students may examine the

655 reactions of other governments, including that of the United States, and world  
656 opinion during and after the Armenian genocide. The Red Cross’s aid to  
657 Armenian Genocide survivors also demonstrates the worldwide humanitarian  
658 response to the crisis and the emerging role of the International Committee of the  
659 Red Cross as an international non-governmental humanitarian organization.  
660 They should examine the effects of the genocide on the remaining Armenian  
661 people, who were deprived of their historic homeland, and the ways in which it  
662 became a prototype of subsequent genocides. To connect these multiple effects  
663 of war, students can consider the question: **What were the consequences of**  
664 **World War I for nations, ethnic groups, and people?**

665       The decline of the imperial powers that resulted from the Great War led to  
666 new political structures and political dissent in many European countries, most  
667 notably a revolutionary uprising in Russia. Students can address the following  
668 question: **Why did the Russian Revolution develop and how did it become**  
669 **popular?** In 1917, the ineffectual Czarist leadership was overthrown. The  
670 communist Bolsheviks seized power and struggled to create a new form of  
671 government that established the political monopoly of the Communist Party and  
672 workers’ soviets. Students analyze primary and secondary sources to consider  
673 the dramatic social, political, cultural, and economic effects that resulted from the  
674 revolution. Students may focus their research on a specific group, such as rural  
675 women, to explain cause and effect and change over time.

676

677 **Effects of World War I**

- 678 • How did World War I end? What were the consequences of the postwar  
679 agreement?
- 680 • How did agreements dating from the WWI and post-war periods impact  
681 the map of the Middle East?
- 682 • What were the effects of World War I upon ordinary people?
- 683 • Why does the term “lost generation” refer to those that lived through or  
684 came of age during these years?
- 685 • How did the post-World War I world order contribute to the collapse of the  
686 world-wide economy?

687 In 1919, the victors of World War I—France, Britain, and the United States—  
688 turned toward settling the war, organizing peace, and punishing the losers.  
689 Students can address the following question as they study the short-term  
690 consequences of The Great War: **How did World War I end? What were the**  
691 **consequences of the postwar agreement?** President Woodrow Wilson offered  
692 a vision of a peaceful postwar world order based on the principles of national  
693 self-determination and free trade in his Fourteen Points. However, only some of  
694 his principles were embraced by Britain and France in the Treaty of Versailles.  
695 The leaders of the victorious countries drafted the treaty, which required the  
696 losing powers, particularly Germany, to assume responsibility for starting the war,  
697 and for paying the victors reparations with large amounts of currency and land.  
698 New states were created in Eastern Europe, carved from the territories of the  
699 German, Austrian, Ottoman, and Russian empires. The Treaty of Versailles also  
700 established the mandate system, which granted many of the Allied Powers,

701 including Japan, administrative governance over former territories and colonies  
702 of Germany and the Ottoman Empire. However, in Africa and Asia, colonized  
703 peoples who had fought for the British and French soon realized that they would  
704 not be granted self-determination like Eastern Europeans were. Consequently,  
705 nationalist leaders began to organize independence movements to oppose the  
706 authority of colonial powers. The political and social map of the Middle East  
707 continued to be redrawn through European involvement during and following  
708 World War I. Students should learn about the significance of critical documents  
709 and agreements dating from the WWI and post-war periods in setting the world  
710 map and as a basis for future conflicts by addressing the question: **How did**  
711 **agreements dating from the WWI and post-war periods impact the map of**  
712 **the Middle East?** Students can deepen their understanding of the effects of  
713 treaties that ended World War I and their legacy through simulations that divide  
714 the class into states— including Great Britain, Germany and the Ottoman  
715 Empire, Russia, and newly independent nations, such as Czechoslovakia, – to  
716 debate political and economic policies of the post-war period.

717       The last of Wilson’s Fourteen Points was the creation of a League of Nations  
718 in order to promote permanent peace. Although Wilson arduously rallied for  
719 Congress to join the League, American isolationists were reluctant to enter into  
720 potentially indefinite alliances and thus never consented to join. The American  
721 failure to participate undermined the League’s effectiveness in implementing its  
722 goals.

723 At the end of the war, society and culture was dramatically altered. Students  
724 should address the longer-term consequences of World War I by considering the  
725 question: **What were the effects of World War I upon ordinary people?**

726 Veterans often came home injured mentally (what is now termed post-traumatic  
727 stress disorder or traumatic brain injuries) and physically. These men, along with  
728 the millions that did not return home, served as a constant reminder of the  
729 horrors of modern warfare. Individuals and groups reacted to the dislocation they  
730 felt from the war experience by turning to novel cultural expressions and social  
731 organizations. Artists and authors created counter-cultural art movements  
732 summed up in the term modernism that expressed the disillusionment felt by  
733 many and challenged entrenched styles, traditions, and hierarchies. For  
734 example, Pablo Picasso and the self-identifying “lost generation” that included  
735 Gertrude Stein, Ernest Hemingway, and F. Scott Fitzgerald, among others,  
736 represented and documented the cultural shift initiated by the experience of war.  
737 Students can survey the artistic expressions of these years by addressing the  
738 broader question: **Why does the term “lost generation” refer to those that**  
739 **lived through or came of age during these years?**

740 It is also extremely important for students to understand the connection  
741 between the post-war world and the Great Depression; this question can help  
742 students make that link: **How did the post-World War I world order contribute**  
743 **to the collapse of the world-wide economy?** Europe’s economy was  
744 weakened as a result of the economic and social costs of World War I and was  
745 increasingly supported by American loans. Germany alone was saddled with \$33

746 billion in war reparations. Worldwide agricultural production increased, leading to  
747 falling prices and lack of buying power on the part of rural consumers for  
748 manufactured goods. Industrialized nations reacted by increasing protective  
749 tariffs, which stifled international trade. These economic trends, along with the  
750 burst of the stock market bubble and the collapse of the international banking  
751 system, led to the Great Depression, a time when incomes eroded and  
752 unemployment increased throughout the world. This economic collapse further  
753 undermined liberal democratic regimes and was a major blow to global trade. As  
754 a result, many nation-states developed policies that strengthened the national  
755 economy and raised tariffs, turning away from the free market and open trade.  
756 Students can learn about change over time and understand the world-wide slow  
757 down by comparing levels of productivity, rates of unemployment, and gross  
758 domestic income in several industrialized nations in the years 1929, 1931, and  
759 1934.

760

### 761 **Rise of Totalitarian Governments after World War I**

- 762       • Why did communism and fascism appeal to Europeans in the 1930s?
- 763       • What were key ideas of communism? How were the ideas translated on  
764       the ground?
- 765       • What was totalitarianism and how was it implemented in similar and  
766       different ways in Japan, Germany, Italy, and the Soviet Union?
- 767       • How did Nazis come to power? Why did ordinary people support them?

768 With the collapse of the capitalist market system that caused the Great  
769 Depression, political alternatives to liberal democracies emerged, particularly  
770 communism and fascism. Through the use of graphic organizers, debates, and  
771 position papers, students may compare and contrast how these communist and  
772 fascist governments responded to the collapse of the capitalist system during the  
773 Great Depression. With a side-by-side comparison of these political alternatives,  
774 students can provide an answer to the question: **Why did communism and**  
775 **fascism appeal to Europeans in the 1930s?**

776 After the Russian Revolution, communism emerged as an alternative to  
777 Western-style capitalism in the Soviet Union. Lenin's New Economic Policy  
778 temporarily allowed capitalism until the Soviet economy stabilized after the civil  
779 war that followed the Revolution. The following question can help students  
780 grapple with the ideals versus realities of developments in the Soviet Union:  
781 **What were key ideas of communism and how were the ideas translated on**  
782 **the ground?** Joseph Stalin rose to leadership after the death of Lenin and his  
783 Five-Year Plans provided a Marxist model of state-run development in direct  
784 opposition to capitalism. Under Stalin, the Soviet Union achieved extraordinary  
785 economic growth between 1928 and 1939, but this expansion came at a huge  
786 human cost. Stalin's industrialization plan included forced collectivization of  
787 peasant farms, which ultimately resulted in a massive loss of life. The  
788 government established a system of Gulag labor camps in the Soviet Union and  
789 Siberia to contain political opposition. Stalin's political consolidation led to the  
790 imprisonment and death of many, including wealthy peasants, non-Russians,

791 Jews, and members of the Communist Party suspected of disloyalty. Students  
792 should learn about the magnitude of the imprisonment, persecutions, and death  
793 caused at the by totalitarian rule. Students should learn about the connection  
794 between economic policies and political ideologies, including the crushing of  
795 workers' strikes. With this background they can also examine the famine in  
796 Ukraine that led to the starvation of millions of people; the political purges of  
797 party leaders, artists, engineers, and intellectuals; and the show trials of the  
798 1930s. The following primary sources are particularly useful in communicating  
799 the appeal of Revolution, the importance of the cult of personality in maintaining  
800 support for it, and the perspective of ordinary people: 1) Lenin's Proclamation of  
801 7 November, 1917; 2) Joseph Stalin, Industrialization of the Country (teachers  
802 can search online for a passage that starts with the phrase: "The whole point is  
803 that we are behind Germany in this respect and are still far from having  
804 overtaken her technically and economically."); 3) Hymn to Stalin; 4) Lev  
805 Kopelev's, *Education of a True Believer* (search online for the phrase that begins  
806 with "Stalin said the struggle for grain was the struggle for revolution."); 5)  
807 Posters in support of revolutionary goals. In addition, by analyzing examples of  
808 socialist realist art or reading George Orwell's *Animal Farm*, Arthur Koestler's  
809 *Darkness at Noon*, or Aleksandr Solzhenitsyn's *Gulag Archipelago* students can  
810 acquire deeper insights into this period.

811 One way that some historians have compared transformations in Europe  
812 during the interwar years is through the concept of totalitarianism, or a  
813 centralized state that aims to control all aspects of life through authoritarian use

814 of violence. This question about totalitarianism can help frame students’  
815 comparative explorations of governments and social systems during these years:  
816 **What was totalitarianism and how was it implemented in similar and**  
817 **different ways in Japan, Germany, Italy, and the Soviet Union?** Using this  
818 strategy, students can examine the similarities and differences between the  
819 political structures of the Soviet Union, Germany, and Italy in the 1930s. The  
820 Weimar Republic had emerged from World War I as an example of the  
821 implementation of liberal democratic principles. However, with the debts of World  
822 War I, soaring inflation, and the Depression, portions of the populace and political  
823 establishment who were anxious about radicals turned to the leadership of Adolf  
824 Hitler. Although Hitler’s Nazi party never won an outright majority in any German  
825 election, he was able to exploit enough fear and uncertainty and form alliances  
826 with other parties that opposed Weimar democracy to gain the position of  
827 Chancellor in 1933. Once they had a foothold in government, the Nazis  
828 consolidated their power by limiting dissent and imprisoning opponents,  
829 homosexuals, the sick and elderly, restricting the rights of Jews and other “non-  
830 Aryans,” and rearming the German military. Students can learn about the rise of  
831 the Nazis by addressing the question: **How did Nazis come to power? Why did**  
832 **ordinary people support them?**

833 Fascism provided a nationalist and militaristic alternative to both the individual  
834 rights privileged in liberal democracies and to communism. The fascists in Italy  
835 and the Nazis in Germany established state-directed economies, rearmed their

836 militaries, and imposed gender, religious, and racial hierarchies in the name of an  
837 ultra-patriotic nationalism.

838

### 839 **Causes and Consequences of World War II**

- 840 • Why was the death toll so high during World War II?
- 841 • What were the key goals of the Axis and Allied powers? How was the war  
842 mobilized on different fronts?
- 843 • How did technology affect World War II?
- 844 • How was World War II a total war? How did World War II's actors, goals,  
845 and strategies compare with World War I?
- 846 • How was the Holocaust carried out?

847 The study of Nazism and Stalinism leads directly to an analysis of World War  
848 II and its causes and consequences. The war itself was truly global and included  
849 battlefronts in Europe, Asia, Africa, and the Pacific. Historians estimate that 60  
850 million, or three percent of the total population, died as a result of World War II.

851 This toll includes a large casualty rate among civilians who were swept up in  
852 ground campaigns and were victims of bombing. An overall question students  
853 should consider at the outset and continually throughout their studies of World  
854 War II is: **Why was the death toll so high during World War II?**

855 To become oriented to the leading nations in the conflict, students continue to  
856 learn about the German, Italian, and Japanese attempts to expand their empires  
857 in the 1930s. As in Italy and Germany, Japan's authoritarian government,  
858 increasingly dominated by the military, controlled portions of the economy and

859 furthered imperial ambitions. The expansionist goals of Italy, Germany, and  
860 Japan translated into specific instances of military aggression, first in China, then  
861 in Europe, and finally in the United States, that drew the Allies into war with these  
862 Axis Powers. In Germany, as Hitler began to stretch his empire toward Austria  
863 and Czechoslovakia, Britain and France initially employed a policy of  
864 appeasement, while the United States Congress passed a series of “Neutrality  
865 Acts” designed to keep the nation on a path of nonintervention. Both Europe and  
866 the United States were entangled in domestic financial crises, and the American  
867 populace especially displayed strong isolationist impulses, even convincing  
868 Congress to hold investigations about possible malicious business interests that  
869 had led the country to enter World War I. Appeasement of Hitler finally came to  
870 an end when Germany invaded Poland on September 1, 1939, and World War II  
871 began in Europe. By then, Japan, an imperial power that had already colonized  
872 Korea in 1910 and occupied Manchuria in 1931, invaded China. Students should  
873 learn about the Sino-Japanese War as context for making comparisons between  
874 ideologies, goals, and strategies of the Axis powers. In China, Japanese military  
875 advances led to the death of thousands of civilians, including the horrors of the  
876 “Rape of Nanjing.” Once war broke out in Europe, the Japanese took advantage  
877 of Hitler’s conquests in Western Europe to seize European colonies in Asia.  
878 However, the Japanese saw American power in the Pacific as an obstacle to  
879 their imperial plans, leading them to bomb the United States naval base at Pearl  
880 Harbor in 1941.

881 Through map study, students should identify formation of Allied and Axis  
882 alliances, as well as changes in the makeup of the alliances. They can consider  
883 the following question to understand the broad outlines of wartime alliances:  
884 **What were the key goals of the Axis and Allied powers? How was the war**  
885 **mobilized on different fronts?** Students should learn about the significance of  
886 the Stalin-Hitler Pact of 1939 and its effects in partitioning Poland and bringing  
887 Latvia, Lithuania, and Estonia under Soviet control. They should also identify the  
888 pact's breakdown and the subsequent Soviet alliance with the Allied nations.

889 "This war is a new kind of war...It is warfare in terms of every continent, every  
890 island, every sea, every air lane in the world." As President Franklin Delano  
891 Roosevelt's 1942 statement reveals, soldiers from throughout the world used  
892 tanks, airplanes, and submarines more extensively than in World War I, wreaking  
893 massive destruction on military and civilian populations alike. This question can  
894 frame students' investigations into the unique advances in warfare technology:  
895 **How did technology affect World War II?** Deploying a highly mechanized army  
896 and *blitzkrieg* warfare, Germany's military conquered large portions of Europe in  
897 a short time and expanded the war to include both western and eastern fronts.  
898 Bombing of civilians brought fear, death, and destruction to populations in  
899 Europe, Japan, and elsewhere. Through the use of primary sources, such as  
900 excerpts from radio programs, newsreel shorts, eyewitness accounts, newspaper  
901 articles, and photographs from the period, students can gain a better  
902 understanding of the struggles faced by both soldiers and civilians. This question  
903 will encourage students to make claims, supported by reasons and evidence:

904 **How was World War II a total war? How did World War II’s actors, goals,**  
905 **and strategies compare with World War I?** The activity could be used to  
906 explore war aims and strategies at the outset, in the midst of it, or at the war’s  
907 conclusion. Students can use documents including the Atlantic Charter, Four  
908 Freedoms Speech, and others to support their claims.

909 For much of the European war, the Soviet Union bore the brunt of German  
910 aggression on the eastern front, leading to the death of tens of millions of  
911 soldiers and civilians. With America’s entry into the war, the Allies organized a  
912 counteroffensive that mobilized massive civilian resources to combat the Axis  
913 powers. The Allies retaliated with land and aerial campaigns in North Africa, the  
914 Middle East, Italy, and occupied France which weakened the overstretched Axis  
915 powers. Overland re-supply routes, like in Iran, were critically important to the  
916 war effort while greatly impacting the local populations. The question: **How was**  
917 **the war mobilized on different fronts?** can help students make comparisons  
918 between different areas. Students may explore the tensions that existed between  
919 the Allied powers and how these served as a prelude to the divisions between  
920 the West and the Soviet Union in the postwar period.

921 The war ended with the collapse of the Axis regimes. Heavy fighting in both  
922 Western and Eastern Europe crushed the German military, while the island-to-  
923 island skirmishes in the Pacific pushed back the Japanese forces, culminating in  
924 a heavy bombing campaign of the Japanese islands. Students can learn about  
925 the on-the-ground realities of fighting on the Pacific front by learning about key  
926 battles like Midway, the role of the Filipino-American alliance, and the intense

927 brutality of fighting due to racialized understandings that Japanese had toward  
928 American soldiers and vice-versa. “Comfort Women” is a euphemism that  
929 describes women who were forced into sexual service by the Japanese Army in  
930 occupied territories before and during the war. “Comfort Women” can be taught  
931 as an example of institutionalized sexual slavery; estimates on the total number  
932 of comfort women vary, but most argue that hundreds of thousands of women  
933 were forced into these situations during Japanese occupation. On December 28,  
934 2015, the Governments of Japan and the Republic of Korea entered into an  
935 agreement regarding the issues of comfort women. This document can be found  
936 at [http://www.mofa.go.jp/a\\_o/na/kr/page4e\\_000364.html](http://www.mofa.go.jp/a_o/na/kr/page4e_000364.html). Finally, in August 1945,  
937 the United States unleashed its most deadly weapon, the atomic bomb, in  
938 Hiroshima and Nagasaki, killing more than 200,000 people, forcing Japan to  
939 surrender, and ending World War II. Teachers may ask students to debate the  
940 controversies regarding the American decisions to launch the attacks.

941 Before and during the worldwide conflict, the Nazis implemented racial  
942 policies across the portions of Europe they controlled. The question: **How was**  
943 **the Holocaust enacted?** can guide students’ exploration into the magnitude,  
944 terror, and loss of life caused by Nazi policies. These policies drew upon racial  
945 and eugenicist ideologies. Jehovah’s Witnesses, Poles, Gypsies, homosexuals,  
946 and political activists faced harassment, imprisonment, and death. Jews were the  
947 particular targets of Nazi violence. Nazi policies and actions evolved over time  
948 through initial stripping of rights through the passage of the Nuremberg Laws, an  
949 escalation of persecution through events like Kristallnacht, from the

950 establishment of concentration camps, and then genocide. Germans and their  
951 allies ultimately murdered six million Jews and millions of others through  
952 starvation, forced labor, and by shooting and gassing victims. Sensitivity and  
953 careful planning are needed to bring the history of this period to life for students  
954 in a thoughtful and responsible way. The sheer scope, the action (or inaction) of  
955 civilians, and the inhumanity of the Holocaust can be overwhelming to some  
956 students. By utilizing memoirs, such as Elie Wiesel's *Night*, teachers can provide  
957 students with a deeply personal understanding of the Holocaust, as can the use  
958 of carefully selected primary source materials. Students can also review recorded  
959 testimonials of Holocaust survivors, and teachers can reach out to academic and  
960 public institutions like the United States Holocaust Memorial Museum to find  
961 ways to connect students to the Holocaust. Students may also examine  
962 instances of resistance to the Holocaust by Jews and others. While on the one  
963 hand it is incredibly challenging to teach the enormity and severity of the Jewish  
964 experience during the war, teachers also often face challenges when trying to  
965 explain to students how "the final solution" could be carried out by Germans. It  
966 took thousands of ordinary Germans to operate the machinery of death; the  
967 German military, infrastructure, and even economy were mobilized to kill people.  
968 It is important for teachers and students to examine how in wartime, ordinary  
969 people do terrible things and they should trace how the German machinery of  
970 death grew as large as it did, and why Germans were complicit in it. Primary  
971 sources from the Nuremberg Trials and wartime statistics can help students learn  
972 about the scale of the Holocaust. Immediately following the war, genocide, the

973 systematic killing of members of an ethnic or religious group, was established as  
974 a crime under international law through the development of the United Nations.  
975 Emboldened by this lack of accountability, Adolf Hitler said to his generals on the  
976 eve of their invasion of Poland, “Who, after all, speaks today of the annihilation of  
977 the Armenians?” numerous German military officers who had been stationed in  
978 Turkey during WWI, were aware of the Ottoman regime’s plan to destroy the  
979 Armenians, and some of them even issued orders for the deportation of  
980 Armenians. Without penalty, some later became leaders within the Nazi military  
981 apparatus that carried out the Holocaust. Teachers can introduce the history of  
982 the Near East Relief organization established by the former U.S. ambassador to  
983 the Ottoman Empire, Henry Morgenthau. Near East Relief came to the aid of  
984 hundreds of thousands of Armenian Genocide survivors through the  
985 establishment of orphanages, food and vocational programs, etc. Teachers can  
986 also use the example of the first international aid project of the Red Cross in  
987 helping Armenian Genocide survivors, and the phrase, “Remember the starving  
988 Armenians!” as a means to demonstrate to students the profound effect the  
989 Armenian Genocide had on the American public.

990

991 **International Developments in the Post-World War II World**

- 992       • How did the Cold War develop?
- 993       • How was the Cold War waged all over the world?
- 994       • How did former colonies respond to the Cold War and liberation?
- 995       • How and why did the Cold War end?

996        The effects of World War II reverberated around the world, intensifying three  
997 earlier trends whose effects persisted well into the twenty-first century:  
998 decolonization, the Cold War, and globalization. The war accelerated the decline  
999 of European power worldwide and the rise of the United States militarily,  
1000 economically, and culturally. Nationalist movements fueled by colonial subjects’  
1001 participation in war efforts placed increasing pressure on European powers to  
1002 grant independence. The postwar period also witnessed an escalation in hostility  
1003 between the U.S. and the Soviet Union. Throughout the Cold War, the U.S. and  
1004 the Soviet Union intervened politically, militarily, and economically in dozens of  
1005 nations in Asia, the Middle East, Africa, Latin America, and the Caribbean in an  
1006 effort to protect their strategic interests. Also during the postwar period, economic  
1007 globalization produced the largest world market in history, spreading both  
1008 products and cultural values around the world.

1009        One of the most significant effects of World War II was the emergence of the  
1010 Cold War, which ultimately affected much of the world, including the developing  
1011 world in Asia, Africa, the Middle East, and Latin America. Students can begin  
1012 their Cold War studies by addressing the multi-causal question: **How did**  
1013 **the Cold War develop?** Students should explore the differences between the  
1014 capitalist-democratic United States and the communist-authoritarian Soviet  
1015 Union. These differences were apparent before the war, although they did not  
1016 prevent an alliance against the Axis powers. After the war, hostility increased as  
1017 the two nations disagreed sharply over plans for postwar Europe, especially  
1018 Germany. The fragile alliance preserved at the Yalta Conference, at a terrible

1019 cost to Poland, in February, 1945, between Stalin, Roosevelt, and Churchill  
1020 disintegrated in the following months, especially following Roosevelt’s death and  
1021 the dropping of the atomic bombs. American distrust of the Soviet Union grew  
1022 after its expansion into Eastern Europe, while the Soviets justified large troop  
1023 concentrations on the recent German invasion from the West. Both the US and  
1024 the Soviet Union competed to bring non-aligned and newly liberated countries  
1025 into their respective camps. Through the use of structured primary-source  
1026 analysis activities, teachers can develop student understanding of this period.  
1027 Students can also develop their critical thinking and oral language in their study  
1028 of the Cold War by engaging in a Yalta press conference in which the class is  
1029 divided into representatives of the United States, the Soviet Union, and Great  
1030 Britain, as well as members of the press corps. Students can also view a variety  
1031 of postwar speeches, articles, and military decisions to debate when the Cold  
1032 War actually began. For example, they can read Winston Churchill’s “Sinews of  
1033 Peace” Speech delivered in 1946 and Joseph Stalin’s interview in *Pravda* from  
1034 March 14, 1946. Read closely together, students will learn about how Churchill  
1035 and Stalin each laid blame on the other nation for intensifying relations.

1036       Employing a variety of primary-source documents, pictures, and maps from  
1037 the era, students examine the two superpowers’ different plans for Europe after  
1038 the war. The following question will help frame students’ comparative learning  
1039 about the multiple fronts and strategies of waging the Cold War: **How was the**  
1040 **Cold War waged all over the world?** The Soviet Union consolidated its control  
1041 over central Europe with the division of Germany and the creation of satellite

1042 states in eastern and southeastern Europe. The Soviets consolidated their  
1043 empire in Eastern Europe using repressive tactics that had been used in their  
1044 home state. The United States became involved in supporting the re-  
1045 establishment of liberal democratic states in Western Europe. It developed the  
1046 Marshall Plan, a massive American economic recovery project for Western  
1047 Europe, and the Truman Doctrine, which affirmed American support for people  
1048 fighting against communist insurgents. The Soviet Union viewed these plans as  
1049 an effort to protect American hegemony in Europe. In response to the formation  
1050 of the North Atlantic Treaty Organization (NATO), a 1949 military alliance  
1051 between the United States, western European nations, and Canada, the Soviet  
1052 Union initiated the Warsaw Pact of 1955, which aimed to protect its eastern  
1053 European territory and broader sphere of influence. Uprisings in Poland and  
1054 Hungary (1956), and Czechoslovakia (1968) exposed fractures within the Soviet  
1055 sphere of influence by revealing insurgent sentiment from those presenting what  
1056 they considered a purer and less repressive form of communism, as well as by  
1057 anti-communists.

1058       The Cold War grew in intensity as the Soviet Union developed atomic  
1059 weapons in an effort to catch up to the U.S. militarily. An arms race continued for  
1060 decades as the superpowers competed over advancements in nuclear weapons  
1061 technology. After a long civil war, communists, led by Mao Zedong, came to  
1062 power in China, expanding the geographic scope of the Cold War. The presence  
1063 of communist China complicated the earlier bipolar Cold War world, as tensions  
1064 developed between the two communist powers. The Great Leap Forward (1958-

1065 1961) and the Cultural Revolution (1966-1976) caused massive turmoil in China.  
1066 Students should learn about the unrest and disorder in China during these years;  
1067 elites were made to work on farms; there was arbitrary application of  
1068 revolutionary justice; the Red Guard even turned on members of Mao’s own  
1069 party. The question **How was the Cold War waged all over the world?** can  
1070 continue to frame students’ understanding of the Chinese experience. Moreover,  
1071 if students learn about the ascent of Communism in China in the middle of the  
1072 twentieth century, it will lay the ground work for their understanding of its later  
1073 status when its markets opened, but political system did not.

1074 Cold War competition spread throughout East and Southeast Asia, the Middle  
1075 East, Africa, and Latin America. Both superpowers constructed regional alliances  
1076 in an effort to counter their opponents’ power. Given the high stakes of nuclear  
1077 war, the two superpowers engaged in a number of wars by proxy. Using a variety  
1078 of maps, primary sources, and classroom simulation activities, students learn that  
1079 throughout the Cold War, the United States and the Soviet Union intervened  
1080 politically, militarily, and economically in dozens of nations in Asia, Africa, Latin  
1081 America, the Middle East, and the Caribbean in an effort to protect their strategic  
1082 interests. While students will learn about the war in Vietnam in eleventh grade,  
1083 teachers should select examples of Cold War proxy wars from each continent  
1084 affected by the global conflict. Students should be sure that they consider the  
1085 varied perspectives of the people on the ground in each nation, as well as the  
1086 American and Soviet interests. This question can help students connect de-

1087    colonization to Cold War struggles and place them in a comparative context:

1088    **How did former colonies respond to the Cold War and liberation?**

1089        These “Third World” interventions intersected with movements for  
1090    independence and nation-building, creating opportunities for nationalist leaders  
1091    to improve their political position by playing superpowers against each other. But  
1092    superpower interventions also complicated internal developments in those  
1093    regions, often compelling leaders or factions to align with one or the other  
1094    superpowers and follow their development plans. Teachers should consider  
1095    assigning a research project in which students study in depth one “hot spot” in  
1096    the Cold War, which was a site of intense conflict outside of the Soviet Union and  
1097    United States. The Cold War Blueprint provides detailed instructions and sources  
1098    for these ten hot spots: Algerian War of Independence (1954-1962); Afghanistan  
1099    (1979-1989); Cambodia (specifically the Cambodian genocide); Angola;  
1100    Nicaragua; Guatemala; Congo; Iran; Hungary; Cuba. The Blueprint is a free  
1101    curriculum developed by the California History-Social Science Project  
1102    (<http://chssp.ucdavis.edu>).

1103        A wave of new states formed throughout Asia and Africa, promising liberal  
1104    democratic governments and market economies. India led the way in 1947,  
1105    becoming the world’s largest democracy. Falling economic opportunities after the  
1106    oil crisis of the 1970s prompted a wave of migrations from former colonies to  
1107    imperial metropolises, or former imperial centers. Britain, France, and other  
1108    western European nations became increasingly diverse as former subjects  
1109    relocated there permanently in search of economic opportunity.

1110 As industrialized nations grew more dependent on foreign oil, the Middle East  
1111 became a central battleground of the Cold War. Students can continue their  
1112 comparative studies of the Cold War in the Middle East by considering this  
1113 question: **How was the Cold War waged all over the world?** In the Middle  
1114 East, nationalism emerged as powerful force. For example, Iran nationalized its  
1115 oil industry after WWII, provoking an international backlash that ultimately ended  
1116 in a CIA-led coup d’etat in 1953. Middle Eastern nations also often tried to play  
1117 one superpower against the other. The legacy of the Holocaust greatly influenced  
1118 world opinion favoring the idea of a Jewish state. In 1947, the United Nations  
1119 passed a partition plan that would have divided the British Mandate for Palestine  
1120 into separate Jewish and Arab states. When the British Mandate for Palestine  
1121 expired in 1948, David Ben-Gurion established the Jewish state of Israel. Arab  
1122 nations, such as Syria, Lebanon, Jordan, Iraq, and parts of Turkey, also achieved  
1123 their independence through their respective mandates. Students should return  
1124 back to the Balfour Declaration and recall the competing interests in the creation  
1125 of Israel. In response to an independent Israel, the Arab states surrounding Israel  
1126 launched an invasion of the newly-declared nation. Students should use this  
1127 post-colonial and Cold War background as part of the context that frames the  
1128 ongoing struggles in the Middle East.

1129 After nearly half a century of proxy wars and worldwide tensions related to  
1130 the Cold War, the Soviet Union collapsed from both internal and external  
1131 weaknesses. Students can consider the question: **How and why did the Cold**  
1132 **War end?** to chart developments that led to the dissolution of the Soviet Union.

1133 Economic problems within the nation and an overburdened military weakened  
1134 the country. Gorbachev’s reform policies unintentionally encouraged dissidents to  
1135 push for even greater change, ultimately leading to the breakup of the Soviet  
1136 Union. Its disintegration spawned several independent republics, reflecting the  
1137 principles of national identity and self-determination. Teachers can use the Cold  
1138 War Blueprint lesson on the end of the Cold War to help students identify change  
1139 over time and cause and effect in bringing about the end of the Cold War. The  
1140 lesson highlights the breakdown of détente, pressures on the Soviet Union like  
1141 the ongoing war in Afghanistan and dissidents, developments in the United  
1142 States, and the diplomatic relations between the American leaders. These  
1143 complex inter-connected causes help students to navigate the web of worldwide  
1144 relations through the late 1980s.

1145

1146 **Nation-Building in the Contemporary World**

- 1147       • How have nations organized in the post-Cold War world?
- 1148       • How have nations struggled in similar and different ways to achieve  
1149       economic, political, and social stability?
- 1150       • How have developing nations worked together to identify and attempt to  
1151       solve challenges?

1152       Stretching from the World War II years through the contemporary period,  
1153 former colonies and dependent nations have embraced different political and  
1154 economic systems in an effort to provide stability and security. Students can  
1155 study the past thirty years of global history in a comparative context by

1156 addressing the question: **How have nations organized in the post-Cold War**  
1157 **world?** Through the study of diverse regions and peoples, students learn in this  
1158 unit that many nations share similar challenges in attempting to unite. This  
1159 question can help guide students as they explore common challenges faced by  
1160 nations: **How have nations struggled in similar and different ways to**  
1161 **achieve economic, political, and social stability?** For example, as in some  
1162 European countries, the presence of multiple ethnic, linguistic, and cultural  
1163 groups within the borders of an individual state influenced nation-building efforts  
1164 in developing regions. Further, many places have experienced civil wars or  
1165 regional disputes that led to civilian casualties. Dictators continue to rule several  
1166 nation-states. At the same time, other countries have shifted to civilian  
1167 governments and popular, free, multiparty elections. In this unit, students can  
1168 engage in a comparative analysis of postcolonial developments in at least three  
1169 of the following regions: Africa, the Middle East, Latin America, or China.  
1170 Students can demonstrate their understanding of the contemporary world  
1171 through multimedia projects, written reports, or structured oral presentations.  
1172 Teachers may also want to add a civics component to this unit, in which students  
1173 are asked to participate in a virtual or real life situation that connects them to the  
1174 region or topic of study.

1175       Newly independent nations faced many challenges in the post-colonial era.  
1176 These new countries inherited colonial borders that artificially divided some  
1177 ethnic groups into multiple states. The opposite process was equally destructive:  
1178 new governments used coercive and authoritarian means in attempts to unify

1179 multiple ethnic groups within their inherited colonial borders into nation-states  
1180 where loyalty centered on the state. In many cases, European nations continued  
1181 to exercise considerable political and economic influence over former colonies,  
1182 challenging the autonomy of these states. Serious problems achieving economic  
1183 development contributed to the lowest longevity rates in the world. While most  
1184 residents in sub-Saharan Africa experienced modest living for decades, many  
1185 states have experienced rising standards since the beginning of the millennium.  
1186 Students might consider more recent developments in Botswana to learn about  
1187 rising standards of living and engaged citizenship. Several countries contain  
1188 important natural resources, including petroleum, which may assist economic  
1189 development and improve quality of life in coming years. One of the greatest  
1190 challenges to stability in Africa has been the AIDS epidemic, which has killed or  
1191 disabled otherwise productive laborers and taxed economic resources. Several  
1192 stable republics exist, however, including Botswana, Ghana, Morocco, and South  
1193 Africa, where Apartheid gave way to multi-party democracy in the 1990s, though  
1194 these countries continue to be challenged by an unequal distribution of wealth,  
1195 corruption, and one-party rule.

1196 In the Middle East, tensions between Israel and its neighbors remain high,  
1197 especially over a future Palestinian state (typically referred to as the two-state  
1198 solution) and Arab recognition of Israel. Differences within Islam between Sunni  
1199 and Shia communities have provided ideological fuel for political controversies.  
1200 The emergence of Iraq as the first Arab Shia-controlled nation has complicated  
1201 regional relations. Iran has been a Shia-controlled country for centuries and since

1202 the Islamic Revolution in the late 1970s has been ostracized by the international  
1203 community and most regional states. The fragile political affairs of the area are  
1204 further aggravated by its strategic importance as a supplier of global oil,  
1205 unresolved problems of displaced Palestinian refugees, the recurrent use of  
1206 terrorism, and territorial disputes. The 2009 presidential election protests in Iran  
1207 and the widespread unrest and political change that began in 2011 (often called  
1208 the Arab Spring) are important examples of contemporary political change in the  
1209 region. Careful study of political and natural resource maps help students  
1210 understand the relative location and the geopolitical, cultural, military, and  
1211 economic significance of such key states as Saudi Arabia, Turkey, Syria,  
1212 Lebanon, Jordan, Israel, Kuwait, Iraq, and Iran.

1213 Latin American conflicts have often reflected differences between indigenous  
1214 people and mestizos, as well as between leftist and conservative ideologies and  
1215 socialist and capitalist economies. In the 1980s, several Central American states  
1216 experienced protracted civil wars, but by the 1990s these conflicts had subsided,  
1217 though their underlying issues remained unresolved. Some states, such as Costa  
1218 Rica and Peru, have long-lived stable democracies, while achieving growth in a  
1219 globalized economy. As a case study, students may look at present-day Mexico,  
1220 a nation shaped by its revolution of 1910-20, and the political, economic, and  
1221 social system that emerged from it. Among Mexico's strengths are its sense of  
1222 national identity, and relative political stability and successful economic  
1223 development. Students can compare Mexico's experience in an international  
1224 context, emphasizing its ties to other Latin American nations as well as its

1225 complex relationship with the United States, especially in light of the North  
1226 American Free Trade Agreement. Students might also investigate why the drug  
1227 trade (and the violence it spawns) is a serious problem in Mexico and several  
1228 states in South America. They should also learn about immigration from the  
1229 Mexican perspective, understanding the plurality of “push” and “pull” factors that  
1230 have encouraged Mexican migration over the past thirty years.

1231       Students can explore countries in the developing world collectively by  
1232 addressing the question: **How have developing nations worked together to**  
1233 **identify and attempt to solve challenges?** Petroleum exports have been a  
1234 source of economic vitality for Organization of Petroleum Exporting Countries  
1235 (OPEC) members in the Middle East and Latin America. But many other Latin  
1236 American and African nations have often been forced to rely on the export of a  
1237 few raw materials as the basis of their economies, which can also fluctuate in  
1238 value drastically on the world market. As a result, some nations have ended up  
1239 deeply in debt to foreign banks. They have often turned to international financial  
1240 institutions, such as the International Monetary Fund (IMF), for assistance, which  
1241 generally require their governments to undertake drastic cuts in social services  
1242 as a condition for receiving loans.

1243       Since the 1980s, several Asian countries (particularly China, Singapore, Hong  
1244 Kong, South Korea, and Japan) became notable economic success stories.  
1245 China in particular skyrocketed as a major manufacturer of inexpensive goods,  
1246 which increasingly included electronics. Many historians and political scientists  
1247 have debated the degree to which China’s capitalism is likely to prompt changes

1248 in its authoritarian, single-party government. Some economists project that  
1249 China, along with India, may lead to Asia’s reemergence as the center of the  
1250 global economy sometime in the twenty-first century. To understand the full  
1251 complexity of these new centers of power, students might consider the degree to  
1252 which governments in these regions support democracy and individual liberties,  
1253 especially as they seek to confront violence and instability. As students explore  
1254 future economic trajectories in these regions, they could consider the relationship  
1255 between capitalist economies and varying degrees of democratic forms of  
1256 government.

**Grade Ten Classroom Example: How and Why Was the Cold War Fought?**

Ms. Smith’s class has been learning about international developments of the 1980s and 1990s. The class has studied developments in South Africa, India, Israel, and Mexico. The last case-study is China. Ms. Smith guides her students through a short lesson that addresses the question: **How did China pursue an “alternative path” to reform in the 1980s?** Ms. Smith’s goal is to show students how starting in the 1980s and escalating in the 1980s and 1990s, China’s economy underwent significant transformations.

Ms. Smith has her students read a three-paragraph secondary source that comes from the *History Blueprint Cold War Unit*, “The End of the Cold War.” Her students learn how in the 1980s the Chinese Government was controlled by the Communist Party, which was led by Deng Xiaoping. During this decade the government began a program of economic reforms. In several ways, these

reforms abandoned the communist economic model and switched to capitalist incentives. For example, they broke up many of the communes and allowed each farming household to make its own decisions and sell its produce in the market. Her students also learn from the secondary source that China’s political system did not reform; in fact a series of humanitarian crises, especially the Tiananmen Square massacre, shone a light on the differences between open economic and closed political systems.

After going through this secondary source, Ms. Smith’s students read two primary sources and answer scaffolded questions about each: 1) *Deng Xiaoping’s Remarks to the Central Committee, Feb. 24, 1984*; and 2) *U.S. State Department Summary, June 5, 1989*. Together, these two documents help students understand China’s complex developments. They will also be necessary context for understanding the role that China plays in the world in contemporary times, which they will learn about in the last unit that focuses on globalization.

Source: This classroom example is a summarized version of the “The End of the Cold War” lesson from *The History Blueprint: The Cold War*, Copyright © 2013, Regents of the University of California, Davis Campus. The History Blueprint is a free curriculum developed by the California History-Social Science Project (<http://chssp.ucdavis.edu>), designed to increase student literacy and understanding of history. Three units are available for free download from the CHSSP’s website, including The Cold War, a comprehensive Standards-aligned

unit for 10<sup>th</sup> and 11<sup>th</sup> grade teachers that combines carefully selected and excerpted primary sources, original content, and substantive support for student literacy development. For more information or to download the curriculum, visit: <http://chssp.ucdavis.edu/programs/historyblueprint>.

**CA HSS Content Standards:** 10.10

**CA HSS Analysis Skills (9-12):** Historical Interpretation 2

**CA CCSS for ELA/Literacy:** RH.9–10.2, 3, 9

**CA ELD Standards:** ELD.PI.9–10.6a

1257

1258        In their study of the two world wars, students examined the origins and  
1259 consequences of the Armenian Genocide and the Holocaust. Students should  
1260 understand that genocide is a phenomenon that has continued throughout the  
1261 twentieth and into the twenty-first century. Students examine the root causes of  
1262 the genocides in Cambodia, Rwanda, and Darfur. They should be able to engage  
1263 in discussions about how genocides can be prevented by the international  
1264 community, and be able to examine arguments and evidence for and against  
1265 intervention, the role of public support for the intervention, and the possible  
1266 consequences of such interventions. In covering this topic teachers can integrate  
1267 survivor, rescuer, liberator, and witness oral testimony to students, but should be  
1268 aware of how images and accounts of genocide can be traumatic for teenagers.  
1269 The United States Holocaust Memorial Museum has published guidelines for  
1270 teaching the Holocaust that can be applied to other genocides as well.

1271

1272 **Economic Integration and Contemporary Revolutions in Information,**

1273 **Technology, and Communications**

- 1274       • How has globalization affected people, nations, and capital?
- 1275       • How has the post-Cold War world and globalization facilitated extremist
- 1276           and terrorist organizations?

1277       World War II accelerated the trend of globalization, the freer and faster

1278 movement of people, ideas, capital, and resources across borders. The question:

1279 **How has globalization affected people, nations, and capital?** can guide

1280 students' investigation through this last unit. This was seen in transnational

1281 developments such as the formation of international organizations like the United

1282 Nations, which attempted to create a forum for nations to resolve their

1283 differences and to work collaboratively on global issues. For example, the United

1284 Nations established universal standards for human rights and became a forum

1285 for women's and civil rights activists. Knowledge of scientific and medical

1286 breakthroughs has spread worldwide, with international efforts to address

1287 problems of disease, natural disasters, and environmental degradation.

1288       Economic globalization took the form of multinational corporations and

1289 international financial institutions such as the International Monetary Fund (IMF),

1290 World Bank, and the General Agreement on Tariffs and Trade (GATT), which

1291 supported loans for development and endorsed the principle of free trade. The

1292 World Trade Organization (WTO) replaced GATT in 1995. Regional trading blocs

1293 also developed, most notably in Europe and later in North America. Key to

1294 economic globalization was the development of communications technology that

1295 enabled financial information and funds to move easily. New technologies also  
1296 facilitated the spread of consumer products and popular film, television,  
1297 advertising, and other media around the globe. New economic opportunities and  
1298 liberalized immigration laws prompted the revival of global migration beginning in  
1299 the 1960s and accelerated global economic exchange. Global consumption  
1300 patterns created homogenized cultural experiences in the global cities that  
1301 sprang up around the world; for example, critics assert that the  
1302 “McDonaldization” of the world effectively Americanizes diverse cities. In  
1303 addition, critics point out negative aspects of globalization, pointing to  
1304 environmental concerns, the impact on child labor, women’s rights and other  
1305 issues. Using cost-benefit analysis, students may examine the differential impact  
1306 of globalization by dramatizing a mock Congressional hearing on NAFTA,  
1307 including roles for American, Canadian, and Mexican business owners, farmers,  
1308 and workers. Students might also work through a variety of globalization issues  
1309 through Model United Nations simulations.

1310       Globalization also contributed to breakthroughs in medical and scientific  
1311 technology, which have improved average health and longevity worldwide.  
1312 Health problems did not disappear, however. Disease and mortality worldwide  
1313 remained a function of location and financial resources, with the poorest  
1314 people—typically in Africa and parts of Asia—facing the most intractable  
1315 problems. Ironically, other health problems, such as obesity and heart disease,  
1316 were greatest in the most prosperous nations, where overabundance of food  
1317 rather than scarcity was the greater challenge. As the twenty-first century began,

1318 researchers, international aid organizations and intergovernmental groups  
1319 continued to work to address a variety of health challenges worldwide. Advances  
1320 from a green revolution in agriculture as well as inexpensive and efficient  
1321 methods of accessing water and energy have offered hope to confront the  
1322 enduring problems of accessing resources.

1323       Globalization and its critics have contributed to the rise and spreading  
1324 popularity of extremist movements. Students can learn about twenty-first century  
1325 developments related to globalization by addressing the question: **How has the**  
1326 **post-Cold War world and globalization facilitated extremist and terrorist**  
1327 **organizations?** Students should address this question and related topics with  
1328 the complexity that it deserves. One way to explore these most recent world-wide  
1329 developments is by investigating themes that characterize recent history and  
1330 world affairs. Students should be encouraged to bring their studies up-to-date; to  
1331 read and view primary sources that represent a wide variety of perspectives from  
1332 people around the globe; and to analyze the historical roots of these recent  
1333 developments.

1334       The following four thematic topics that frame recent history are excerpted and  
1335 adapted from Appendix C, *Teaching the Contemporary World*. In the  
1336 contemporary world there has been a tension between integrative and  
1337 disintegrative forces. The first, “The Return of Geopolitics,” asks whether the  
1338 world is becoming more or less peaceful and whether the nature of conflict is  
1339 changing. The second, “Globalization and Its Discontents,” highlights processes  
1340 of economic globalization and asks what benefits they have brought—and at

1341 what costs. The third, “Rights, Religion, and Identity,” asks how ideas about  
1342 universal human rights may relate to other value and identity systems in the  
1343 contemporary world, including resurgent religiosity. The fourth, “A New Role for  
1344 the West,” asks whether the Western world, the dominant force in world politics  
1345 since the late fifteenth century, is today in decline. What is the West’s role now  
1346 that the colonial era has ended, now that Western prosperity depends on  
1347 borrowing from East Asia, and now that the international influence of Western  
1348 powers is being supplanted by rising states, notably Brazil, Russia, India, and  
1349 China?

1350 **The New Geopolitics**

1351 Over the past twenty years, the world has oscillated between dreams of  
1352 perpetual peace and the despair of enduring conflict. A new era began on  
1353 November 9, 1989, when the Berlin Wall tumbled, marking the Cold War’s  
1354 peaceful end—a denouement to a forty-year conflict that few had dared to  
1355 entertain. That era seemed to end on September 11, 2001, when nineteen  
1356 Islamic extremists sponsored by Al Qaeda in an effort to make a political  
1357 statement, crashed civilian airliners into the World Trade Center in New York and  
1358 the Pentagon building in Washington D.C., murdering almost 3,000 civilians.  
1359 Since 9/11, the hopes for a more peaceful world that the end of the Cold War  
1360 spawned have been displaced by a resurgence of international conflict,  
1361 especially in the Middle East and Central Asia. While the major powers have  
1362 avoided war with each other, the tenor of international relations became more  
1363 hostile after 9/11, as long-standing international friendships (i.e., between the

1364 United States and Europe) deteriorated and old animosities rekindled themselves  
1365 (i.e., Russia and the West).

1366       When the Cold War ended with the fall of the Berlin Wall in 1989 and the  
1367 breakdown of the Soviet Union in 1991, what kind of world did it bequeath? Why  
1368 did the vision of a “New World Order” that U.S. President George H.W. Bush  
1369 articulated in 1990—a vision of a world more stable, pacific, and predictable than  
1370 the world of the past—fail to come to pass? Did 9/11 change everything? Or was  
1371 the world in the 1990s less stable than it might have appeared at the time?

1372 **The Impact of Globalization**

1373       “Globalization” has become a buzzword of the post-Cold War era, but ours is  
1374 not the first era to have experienced significant economic, social, and cultural  
1375 integration. During the late nineteenth century, the transatlantic economy was at  
1376 least as globalized as it is today, with capital and goods flowing freely across the  
1377 ocean and labor moving between countries without the legal barriers that restrict  
1378 immigration today. The world since the 1970s has experienced a return to the  
1379 globalizing patterns of the past. The advent of electronic communications, the  
1380 dramatic decline in international transportation costs associated with  
1381 containerized shipping, and the deregulation of markets has led to economic  
1382 integration among nations and even convergence in social trends, cultural  
1383 patterns, and consumption habits. In part because of the processes known as  
1384 globalization, as a new range of nonstate or “transnational” international actors—  
1385 including multinational corporations, offshore banks, and international  
1386 nongovernmental organizations (NGOs)—have come to coexist, sometimes

1387 uneasily, with the nation-states that remain the dominant elements of  
1388 international society.

1389 Economists generally credit economic globalization with having increased the  
1390 world's overall levels of wealth and well-being. Yet globalization has not  
1391 necessarily reduced economic inequalities among societies. In part, this is  
1392 because the mobility that capital (i.e., money) and goods enjoy in our globalized  
1393 economy is not fully shared by labor. While manufacturers in a high-wage  
1394 country, like the United States, can now easily relocate production for the  
1395 American market to a low-wage country, like Mexico, in order to reduce costs, it  
1396 is much more difficult for Mexican workers to immigrate legally to the United  
1397 States and vice versa. These differences in the treatment of capital, goods, and  
1398 labor may explain why globalization in the contemporary era has not reduced  
1399 income inequalities among nations as effectively as it did in the late nineteenth  
1400 century, when mass migration diminished transatlantic income inequalities. While  
1401 globalization has increased overall global wealth, it has also bred discontent.  
1402 Critics in the industrialized world blame globalization for “exporting” jobs, and in  
1403 the developing world, critics accuse multinational corporations of exploiting low-  
1404 wage and child laborers, proliferating slums, polluting local ecosystems, and  
1405 sustaining an Americanizing consumer culture.

1406 Although globalization has bound societies together in ties of mutual  
1407 interdependence, it has also involved the spread of multinational corporations  
1408 whose activities far transcend the jurisdictions of individual nation-states. These  
1409 corporations include some of the most iconic and successful companies in the

1410 world today. Although the history of the multinational corporation reaches back to  
1411 the Dutch and English East Indian trading companies of the seventeenth century,  
1412 what makes the modern multinational distinctive is its capacity to spread out the  
1413 productive process across different countries. Apple’s iPod, for example, is  
1414 designed in northern California and assembled in China, out of components that  
1415 originate in Japan, Taiwan, Korea, Singapore, and many other countries. A  
1416 leading example of “modular” production, the iPod’s cosmopolitan origins reflect  
1417 the new realities of the integrated twenty-first century economy.

1418       Globalization does not only affect production, it has also shaped the tastes  
1419 and expectations of consumers. The ascent of multinational business and new  
1420 marketing techniques in the second half of the twentieth century have contributed  
1421 toward the convergence of consumer tastes and preferences, often around  
1422 instantly recognizable “global” brands. Such transformations have led some  
1423 critics to argue that globalization displaces local cultures with a single,  
1424 homogenizing, global fashion.

1425       Yet globalization, as most social scientists understand the term, involves  
1426 more than simple economic integration. It implies the convergence of societies  
1427 around a common version of modernity; it suggests that the world is shrinking  
1428 and the peoples who inhabit it are becoming more like one another. Globalization  
1429 empowers big, multinational business, but it has also brought the rise of  
1430 transnational organizations. These include both activist networks such as  
1431 Amnesty International and Greenpeace and, more troublingly, criminal and  
1432 terrorist organizations that work across national borders.

1433       As globalization has limited the autonomy of nations and has empowered  
1434 nonstate actors, it may have troubling implications for the modern nation-state.  
1435 As students will have learned in grade ten, the nation-state grew in the  
1436 nineteenth and twentieth centuries in response to larger modernizing changes.  
1437 Industrialization, class conflict, and the business cycle in the nineteenth and  
1438 twentieth centuries all contributed to the expansion of state authority, as  
1439 governments assumed responsibilities for the well-being of their citizens and the  
1440 stability of their national economies. In the contemporary world, however, the  
1441 authority of the nation-state appears increasingly feeble in relation to the  
1442 globalization of economic and other activities, all of which raises challenging  
1443 questions about the future of governance in an integrating global society. The  
1444 United Nations resembles an international forum rather than an international  
1445 government, and its ability to impose standards (such as environmental  
1446 regulations or consumer protection law) on its own members remains very  
1447 limited. Students should be able to identify a range of issues including  
1448 sustainable development that could be described as “transnational” in scope.  
1449 What are the strengths and weaknesses of the United Nations when it comes to  
1450 dealing with problems (whether economic, criminal, or environmental) that cross  
1451 international borders? What are some of the advantages and disadvantages of  
1452 being able to draw world powers together in one place but not being able to  
1453 independently enforce the agreements they may enter into?

1454       **Rights, Religion, and Identity**

1455       During the Enlightenment, as students will have learned, the proponents of

1456 “natural rights” argued that all human beings enjoyed inalienable freedoms—  
1457 including the freedom to oppose oppressive governments. This claim was  
1458 enshrined in the American Declaration of Independence (1776) and the French  
1459 Assembly’s Declaration of the Rights of Man and Citizen (1789). Yet the  
1460 Enlightenment’s vision of universal natural rights was not incorporated into  
1461 international law until 1948, when, building on an upsurge in concern for human  
1462 rights associated with the Second World War, the Universal Declaration of  
1463 Human Rights affirmed a broad range of freedoms belonging to all individuals  
1464 regardless of their citizenship, ethnicity, or gender. These rights fell into two  
1465 broad categories: legal and political rights, including freedom from persecution  
1466 and bodily harm; and social and economic rights, including rights to material  
1467 sustenance, health, education, and to gainful employment. Yet, the Universal  
1468 Declaration, for all the nobility of its sentiments, was largely subordinated during  
1469 its first decades to the convention of state sovereignty. In this respect, the limits  
1470 of the Universal Declaration mirrored those of the United Nations: while it  
1471 asserted asset of human rights accruing to all men and women, regardless of  
1472 their citizenship, the Universal Declaration included no mechanisms to compel  
1473 recalcitrant governments to respect the rights of their citizens.

1474 From the 1970s, concern for human rights began to rise. In part, the ascent of  
1475 ideas about human rights had to do with nongovernmental organizations such as  
1476 Freedom House, Human Rights Watch, and Doctors Without Borders and NGOs  
1477 committed to increasing public knowledge about human rights and humanitarian  
1478 law such as Human Rights Education Associates (HREA) and the Education and

1479 Outreach program of the International Committee of the Red Cross and more  
1480 recently HRE USA. Such groups publicized human rights abuses being  
1481 perpetrated by both right- and left-wing regimes. Their work was facilitated by  
1482 innovations in communications technologies, including satellite broadcasting, that  
1483 made the abuse of human rights more visible to public opinion in foreign  
1484 countries than had previously been the case. From this perspective, the growth  
1485 of concern for human rights in the contemporary era was part of a larger  
1486 globalizing process.

1487       At the same time, the emergence of human rights as a major foreign policy  
1488 concern for the United States and other Western countries also had to do with  
1489 the Cold War. From the 1970s, the U.S. and its allies promoted human rights as  
1490 a way to attack the legitimacy of the authoritarian Soviet Union—a country that  
1491 routinely abused its own citizens. The tactic enjoyed considerable success, and  
1492 human rights activists such as Pope John Paul II, Lech Walesa (Poland), Vaclav  
1493 Havel (Czechoslovakia), and Andrei Sakharov (Russia) played an important role  
1494 in eroding the legitimacy of communist rule, helping to bring the Cold War to an  
1495 end.

1496       Western countries, for the most part, tend to have more complex relationships  
1497 with the idea that human rights have become an international concern. Most  
1498 Western countries now describe the promotion of human rights in foreign  
1499 countries as a central objective for their own foreign policies, even though most  
1500 of them face criticism from groups such as Amnesty International for conditions  
1501 at home (e.g., overcrowded prisons, wrongful convictions, or the death penalty,

1502 or the persistence of conditions inconsistent with standards of economic, social  
1503 and cultural rights).

1504       If the campaign for human rights is a universalizing movement that asserts  
1505 the basic similarity of human expectations across time and place, the  
1506 contemporary era has also witnessed a dramatic movement toward diversity in  
1507 the form of a worldwide religious revival. Reflecting on the history of modern  
1508 nationalism, students may perceive some similarities in the ways in which both  
1509 human rights and religion assert the existence of authorities higher than national  
1510 governments, whether in the form of “natural law” or holy law. Both religious  
1511 leaders and human rights activists affirm that the individual is not only a citizen of  
1512 his or her country: he or she may also be a member of an “identity community”  
1513 far larger than the nation-state, whether the entire human race or a community of  
1514 religious believers spanning many different countries.

1515       The global revival of religiosity has been a defining characteristic of our times.  
1516 It is also a development that would have surprised academic theorists of  
1517 secularization in the 1960s and 1970s who argued that religion was in  
1518 irrevocable decline. Reflecting the resurgence of religion in many parts of the  
1519 world over the past thirty years, politics have become increasingly infused with  
1520 the language of faith. The revival of religion has, in some respects, created new  
1521 cleavages in world politics, both within and among societies. Anti-Western  
1522 violence perpetrated by the followers of a fundamentalist version of Islam has  
1523 contributed to the appearance of deep conflict between the Islamic and Western  
1524 worlds, especially since 9/11. Students should learn about the roots of modern

1525 Islamic extremism by reading a variety of sources from Egyptian writers and the  
1526 Muslim Brotherhood, for example. In numerous societies, such as Nigeria, the  
1527 Sudan, and India, the revival of religion—and of religion as an expression mode  
1528 of political identity—has bred tension and even outright violence between  
1529 members of neighboring religious communities.

1530       Within societies, the proponents of religious orthodoxies have found  
1531 themselves in conflict with secularists, whether in battles over headscarves in  
1532 Istanbul and Paris or over prayer in American schools. While the resurgence of  
1533 religion has been a transnational phenomenon affecting many different countries,  
1534 students ought to be aware that it has been less pronounced in some areas of  
1535 the world, notably Western Europe and China than in others. Students may  
1536 investigate if the world is becoming more or less religious, and what the  
1537 implications of religion are for international relations and for domestic politics in  
1538 the United States and other societies. Why has Western Europe (so far) seemed  
1539 to remain apart from this global trend?

1540 **A New Role for the West**

1541       Perhaps the most dramatic story of the second millennium (1000-1999 CE)  
1542 was the rise of Europe—a remote, salty, and windswept corner of Eurasia—to  
1543 global dominance. The “Rise of the West” was a transformative movement in  
1544 world history, and it brought tumultuous consequences for the entire world.  
1545 Students should have studied the reasons for Europe’s rise to dominance in the  
1546 early modern era, from the growth of the seaborne trading companies of the  
1547 sixteenth and seventeenth centuries to the spread of colonies in the eighteenth

1548 and nineteenth. Have Europe and its Western offshoots, including the United  
1549 States, now entered a phase of relative historical decline? This is a historical  
1550 transformation that students should consider carefully, especially insofar as it  
1551 relates to the “rise” of new powers such as India and the People’s Republic of  
1552 China.

1553       Dominant at the century’s beginning, Europe’s eclipse was a central theme of  
1554 the twentieth century. Exhausted by the century’s two world wars and unable to  
1555 hold back powerful nationalist movements in the colonial world, the European  
1556 colonial empires collapsed in the thirty years after 1945. Simultaneously, the  
1557 major west European countries created among themselves a novel confederal  
1558 apparatus—the European Union—to integrate their economies and to provide a  
1559 modicum of political unity. As an economic initiative, the European Union has  
1560 been highly successful: per capita incomes in Europe remain very high, and the  
1561 west European region has enjoyed an unprecedented phase of peace and  
1562 cooperation. Yet Europe remains dependent on U.S. commitments to NATO (the  
1563 North Atlantic Treaty Organization) for its military security, and even the leading  
1564 European powers are now unable or unwilling to exert significant military force  
1565 beyond the European continent. Global movements of refugees and global  
1566 economic forces are also challenging the stability achieved by the European  
1567 Union.

1568       While the United States, in contrast to Western Europe, remains the most  
1569 powerful state in the international system, it faces similar challenges. Like  
1570 Europe, the United States is committed to large welfare and social security

1571 programs that may prove difficult to fund in the future, as the postwar “baby  
1572 boomers” retire and the country’s working population shrinks relative to its large  
1573 number of retirees. In the world economy, the United States appears less  
1574 dominant than it once was. No longer a net exporter of manufactured goods to  
1575 the rest of the world (as it was from the 1890s to the 1970s), the U.S. runs trade  
1576 deficits and borrows from foreign countries to finance its imports. Its position in  
1577 the global economy has become that of a consumer of last resort, a role that it  
1578 can sustain for only so long as others remain willing to extend financial credit to  
1579 cover its deficits.

1580 China has come to play a very different kind of role in the international  
1581 economy. Already the world’s most populous country, China is projected to  
1582 overtake the U.S. as the largest economy by the middle of the twenty-first  
1583 century. At some point during the twenty-first century, India will overtake China  
1584 as the world’s most populous country. Together with Japan, a country whose  
1585 remarkable postwar recovery in the 1950s and 1960s made it a leading  
1586 economic power, it seems clear that Asia will be the center of global economic  
1587 activity in the twenty-first century.

1588 Contemporary trends—the diversification of economic power and the  
1589 globalization of production, Europe’s military decline, and a shift in the world’s  
1590 demographic center of gravity away from the North Atlantic—are finally reversing  
1591 what historians have called the “Great Divergence” of the eighteenth century: a  
1592 shift in which European growth rates leaped ahead of Asian ones. Among the  
1593 most significant developments of our era, then, has been Asia’s return to the

1594 leading position in the world that it occupied before the rise of the West.  
1595 Exacerbating the West’s relative decline, oil-rich states such as Saudi Arabia,  
1596 Iran, and Venezuela control the energy supplies on which its prosperity depends.  
1597 At the same time, climate effects traceable in part to the environmental  
1598 consequences of reliance on fossil fuels are leading to demands for changes in  
1599 the way energy is produced and used. Meanwhile, climate change has  
1600 contributed to political and economic upheavals that are changing patterns of  
1601 human migration and fueling regional conflicts. Elsewhere, regional powers such  
1602 as Brazil have broken out of former patterns of Cold War subservience and  
1603 economic dependency to become dominant regional and, increasingly, global  
1604 powers. The present global scene now appears less predictable, less  
1605 hierarchical, and—potentially—less stable than in past centuries.  
1606  
1607  
1608  
1609  
1610
