# 40000000004

### SCIENCE TEST

#### 35 Minutes – 40 Questions

**DIRECTIONS:** There are several passages in this test. Each passage is followed by several questions. After reading a passage, choose the best answer to each question and fill in the corresponding oval on your answer document. You may refer to the passages as often as necessary.

You are NOT permitted to use a calculator on this test.

#### Passage I

A study was conducted to examine whether female *Blattella germanica* (a species of cockroach) prefer to eat cat food, cheese, ham, or peanuts. First, 200 mg of each of the 4 foods was separately placed into a single box. Then, adult female *B. germanica* were added to the box. Figure 1 shows how the mass, in mg, of each food in the box changed over time after the addition of the *B. germanica*. Table 1 shows the percent by mass of carbohydrates, lipids, proteins, and water, respectively, present in each of the 4 foods tested in the study.

Figure adapted from Prachumporn Lauprasert et al., "Food Preference and Feeding Behavior of the German Cockroach, *Blattella germanica* (Linnaeus)." ©2006 by the Faculty of Science, Chulalongkorn University.

Table 1				
	Percent by mass			
Food	carbohydrates	lipids	proteins	water
Cat food Cheese Ham Peanuts	1.2 0.5 0.0 15.8	6.0 27.7 18.2 49.6	16.9 20.8 23.6 26.2	66.2 48.4 57.1 6.4

Table adapted from U.S. Department of Agriculture, USDA National Nutrient Database for Standard Reference, Release 24. 2011.

- 1. According to Figure 1, the mass of cheese remaining at 4 hr was closest to which of the following values?
  - **A.** 140 mg
  - **B.** 176 mg
  - **C.** 185 mg
  - **D.** 190 mg
- 2. Suppose a company wants to use food as bait in a trap designed to capture female *B. germanica*. Based on Figure 1, which of the 4 foods should the company place in the trap to maximize the chance of capturing female *B. germanica* ?
  - F. Cat food
  - G. Cheese
  - H. Ham
  - J. Peanuts

## 40000000004

- **3.** Consider the 4 foods in order of the percent by mass of proteins, from lowest to highest. From food to food, as the percent by mass of proteins increased, the mass of food remaining at 28 hr:
  - **A.** increased only.
  - **B.** decreased only.
  - C. increased and then decreased.
  - D. decreased and then increased.
- **4.** Consider the statement "The *B. germanica* ate the food between 0 hr and 4 hr, between 4 hr and 16 hr, between 16 hr and 24 hr, and between 24 hr and 28 hr." This statement is consistent with the data in Figure 1 for how many of the 4 foods?
  - **F.** 1
  - **G.** 2
  - **H.** 3
  - **J.** 4

- **5.** A student predicted that the *B. germanica* would eat less cat food than ham by the end of the study. Do the data in Figure 1 support this prediction?
  - **A.** Yes; at 28 hr, the mass of cat food remaining was about 55 mg greater than the mass of ham remaining.
  - **B.** Yes; at 28 hr, the mass of cat food remaining was about 95 mg greater than the mass of ham remaining.
  - **C.** No; at 28 hr, the mass of cat food remaining was about 55 mg less than the mass of ham remaining.
  - **D.** No; at 28 hr, the mass of cat food remaining was about 95 mg less than the mass of ham remaining.
- **6.** Based on Table 1, when 200 mg of each of the 4 foods was placed in the box, water accounted for more than 100 mg of the mass of which food(s)?
  - **F.** Peanuts only
  - G. Cat food and ham only
  - H. Cheese and peanuts only
  - J. Cat food, cheese, and ham only
